

A Study of the Post-installation Relation between Individual  
Characteristics and Innovativeness Affected by  
Communication Networks and its Implication for MIS Institutionalization

한국외국어대학교 권태형

The intervening influence of interpersonal Communication networks on MIS implementation is investigated based on a proposed research model that integrate a paradigm of MIS and a paradigm of diffusion of innovation.

The findings of the study indicate that communication networks are important to individuals' MIS-related behaviors such as usage and institutionalization.
