Dept. of Earth Science, Sejong University

## Abstract

BV observation of AW Cam (BD+69° 0389, HD48049, BV412) have been carried out, using a CCD Camera attached to 61-cm telescope, at Sobaek mountain Astronomical Observatory. BD +69° 0385 were employed for the comparison. A total of 350 observations were obtained during 3 nights between Jan. 28 and Feb. 19 1993. The light curve have been analyzed by the method of Wilson and Devinney differential correction. The results were compared with the previous solutions.
