연세대학교 치과대학 치주과학교실

목적 : Implant 시술시 흔히 나타나는 Dehiscence, Fenestration 등의 bone defect 경우, Gore-tex augmentation material(GTAM) 을 이용해 Bone Regeneration 을 유도하는 GBR 술식을 보고하고자 합니다.

환자이름 : C.W.K.

성별/나이 : 55 세 / F

Medical history : Non-Specific

P.I. : (1) Gold crown on 6 5 4 5 6 with cantilever on 6

6	5	5	6		7
---	---	---	---	--	---

(2) Residual root with vertical root fracture on #25

(3) Secondary caries on #14

(4) Mild gingival swelling, redness, mild dental calculus deposition

Tx Plan : (1) IMZ dental implant on #25,26,27 area

with immediate implant on #25 site

(2) Old crown removal

Procedure : (1) Radiographic stent 제작 및 length measuring

(2) Diagnostic wax-up & Surgical stent 제작

3) 93.6.30.일 : Implant Surgery under I/A

(a) Extraction of Root Rest of #25

(b) Implant insertion 4.0D/8L, 4.0D/11L, 4.0D/8L(hexa type)

(c) #25 area의 buccal bone fenestration과 #27 area 의 poor bone quality로 인해 DF-DBA,GTAM oval 4,oval 6 cover

(4) 93.8.18일 : exposure 된 일부의 GTAM membrane removal

(5) 94.3.30일 : Second stage surgery & Healing abutment connection  
Regeneration 된 bone과 GTAM memb Biopsy
