Abstract

There are many factors which is to be considered in Workgroup Decision Support System (WGDSS) development. This paper shows the result of questionnaire analysis about the real business meeting environment in Korea. It suggests to check items about WGDSS development based on the concept of Analytic Hierarchy Process.

We suggest a guideline of WGDSS development through showing three inclinations of meeting environment ; a corporation size, a type of industry, and an office year/class in Korea corporation.

The result of this paper will be helpful to those who develop a Group Decision Support system.
