### Abstract

There were collected many Ascomycetes of higher fungi at Mt.Jiri National Park, Mt.Moak Provincial Park and Mt.Bangtae from March to September in 1996.

These were identified by keys of Dennis(1991) and Breitenbach and Kranzlin (1984). As the according to the results, these species are newly to Korea: *Calospora innesii*, *Hypoxylon multiforme*, *H.rubiginosum*, *H.fragiforme*, *H.udum*, *H.rutilans*, *Calopoma quericinum*, *Melanopsma pomiformis*, *Eutypella alnifraga*, *Diaporthe strumella*, *D.pustualte*, *Thyridaria rubronotata*, and *Nectria galliagna*.

Key words: *Calospora innesii*, *Hypoxylon multiforme*, *H.rubiginosum*, *H.fragiforme*, *H.udum*, *H.rutilans*, *Calopoma quericinum*, *Melanopsma pomiformis*, *Eutypella alnifraga*, *Diaporthe strumella*, *D.pustualte*, *Thyridaria rubronotata*, and *Nectria galliagna*.
