

A STUDY ON THE PLANNING OF STORAGE SPACE IN APARTMENT. Oh H. K., Hong Y. K. Department of Housing, Child and Family Studies, Kyung-Hee University, Seoul 130-701, Korea

The purpose of this study was to suggest the desirable storage space plan in apartment based on the results of the investigation. In order to perform the above purpose this study was organized into three sections.

First, literature review to understand the type and the planning standards of storage space.

Second, survey research to investigate the actual conditions and to look for a standard size of storage space in apartment.

Third, suggestions of the better storage space plan through the literature review and survey research.

Personal interview and actual measurement survey method were used with 50 residents of Samsung apartment at Soo-Seo area for this study. The results were analyzed by SAS package program.

The major findings from the survey research were summarized as follows ;

- 1) Storage space of each room was deficient, especially second and third bedroom.
- 2) Total amount of storage space were from 8.57 m² to 23.14 m² and the mean was 11.48 m².
- 3) The number of family member was the most important variable in determining the size of storage space.

These results and suggestions of storage space plan are expected to be used as a basis for the planning of apartment in Korea.
