

## CCD Observations of ER Orionis

J. H. Jeong, Y.-S. Lee, S. H. Park  
 Chungbuk National University

The short period ( $p=0^d.4234$ ) eclipsing binary ER Orionis was observed during January and February in 1997. The Observations were made using the CCD camera attached to the 61cm telescope at Sobaeksan Observatory. The light curves made with our data are shown in Figure 1. Preliminary light curve solution will be presented.

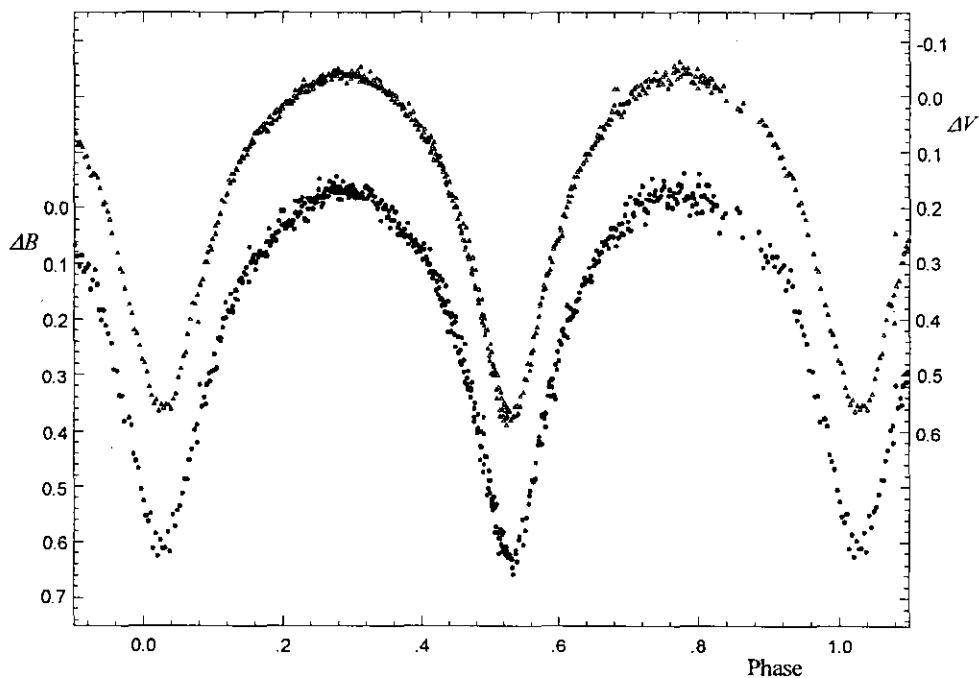

Figure 1.  $BV$  light curves of ER Orionis.
