Present paper describes the current situation of recently identified zoonoses, including potential infectious diseases of public health importance, and its origin of emergence. Newly emerging diseases, though infectious characteristics, be a unpredictable challenge for public health. In addition, once forgotten risks of the old diseases can be a serious load for human life through unexpected occurrence.

The epidemiological trend of emerging diseases require not only a passive surveillance, but more extensive monitoring, research and infrastructure system for efficient prevention.

Key Words : Emerging zoonoses, Current situation, Prospect, Prevention strategy
