

CCD Observations of VW Cep

B. S. Kang, Y. S. Lee

Department of Astronomy, Chungbuk National University

We observed the short period ($p=0^d.2783$) eclipsing binary VW Cep using the CCD camera attached to the 61cm telescope, and perform CCD observations in BV filters for VW Cep during 8 nights in April and May 1999 at Sobaeksan Optical Astronomy Observatory. The light curves made with our data are shown in Figure 1. We'll present the solution of light curves analyzing Figure 1.

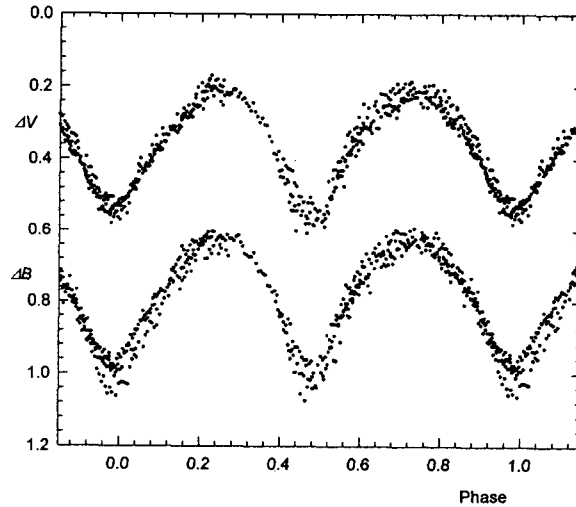

Figure 1. BV light curves of VW Cep.
