Dept. of National Sericulture & Entomology, Suwon 441-100, Korea

A taxonomic study of Korean Dermestidae(Coleoptera) associated with stored silkworm cocoons was carried out. As a result, eleven species of 4 genera were identified as follows ; *Dermestes maculatus* De Geer, *D. frischii* Kugelann, *D. tessellatocollis* Motschulsky, *D. ater* De Geer, *D. vorax* Motschulsky, *D. lardarius* Linné, *Attagenus japonicus* Reitter, *Trogoderma teukton* Beal, *Anthrenus verbasci* (Linné), *An nipponensis* Kalik et N. Ohbayashi and *An. vorax* Waterhouse. Among them, *Anthrenus vorax* and *Trogoderma teukton* were new to Korean fauna and *Dermestes frischii* was new to South Korea. A pictorial key and some biological informations are also given.
