

특강 IV (Special Lecture IV)

Dental Implantology between  
Simplicity and Complexity  
(Surgical and Restorative aspects)

Prof. Dr. Heiner Weber

Professor and chairman of Prosthodontics, University of Tübingen, Germany

Dental implantology has become an established therapy in dentistry. The indications are usually based on tooth gap topography. Based on a long clinical we tried to define the indications according to the major demands of our patients asking for implants. Thus, implants should be inserted

- in order to avoid a removable denture
- in order to avoid preparation of teeth or restorations
- in order to receive a more stable and or less bulky denture.

In some of those situations the surgical treatment has to be very sophisticated. However- particularly, when dealing with removable, implant stabilized dentures -the prosthodontic treatment can be very sophisticated, too. Basically, the surgical efforts are defined by the prosthetic demands. In some cases, the prosthodontic treatment can compensate for surgical difficulties-i.e., that the prosthetic construction could avoid for instant maxillofacial/ orthognathic surgery. The applies for instance to the treatment of the edentulous maxilla.

This lecture will focus on the prosthetic treatment of implant cases with and without special oral and/ or maxillofacial surgery. Particularly combined fixed removable appliances will be shown including precision attachment and swivel-latch techniques.

## 약력

- 1974 - 80 Assistant Professor at the Department of Prosthetics, University of Düsseldorf  
(Head Prof. Dr. H. Böttger)
- 1980 - 82 Associated Professor of the Department of Prosthetics, University of Düsseldorf  
(Head Prof. Dr. H. Böttger)
- 1982 - 93 Professor and Chairman of the Department of Prosthodontics II,  
University of Tübingen
- 1990 - 91 Dean of the Faculty of Medicine, University of Tübingen
- 1995 - 97 Dean of the Dental School, University of Tübingen
- 1993 - 현재 Professor and Chairman of the Department of Prosthodontics  
(united Departments of Prosthodontics I and II), University of Tübingen
