

# Korean Species of the Genus *Fleutiauxellus* Mequignon, 1930 (Coleoptera; Elateridae)

Jin-Il Kim, Tae-Man Han and Seung-Hwan Lee<sup>1</sup>

Dept. of Biology, Sungshin University,

<sup>1</sup>Division of Entomology, National Institute of Agricultural Science and  
Technology

The genus *Fleutiauxellus* distributes throughout the Palaearctic and North American region. Up to now, however, only one species, *Migiwa* (= *Fleutiauxellus*) *quadrillum* (Candèze, 1873), was reported by Kim and Park (1991). In this study, 676 specimens of the genus stored in the Sungshin Women's University and the National Institute of Agricultural Science and Technology were examined. As a result, 5 species including two new to the Korea and three new to science are recognized. However, *F. quadrillum* was not found. Therefore, Korean species of the genus *Fleutiauxellus* are as follows:

Subfamily Negastrinae Nakane et Kishii, 1956 애방아벌레아과  
Genus *Fleutiauxellus* Mequignon, 1930 애방아벌레속(신칭)

1. *Fleutiauxellus curatus*(Candèze, 1873) 검정애방아벌레(신칭)
2. *Fleutiauxellus quadrillum*(Candèze, 1873) 일본턱점애방아벌레(신칭)
3. *Fleutiauxellus yotsuboshi*(Kishii, 1976) 턱점애방아벌레(신칭)
4. *Fleutiauxellus* sp. nov. 1.
5. *Fleutiauxellus* sp. nov. 2.
6. *Fleutiauxellus* sp. nov. 3.
