1-1. The Korean Species of the Genus *Anisotoma* Panzer in Korea  
(Coleoptera: Leiodidae: Leiodinae)

Sun-Jae Park, Hideto Hoshina<sup>1</sup>, and Kee-Jeong Ahn

Department of Biology, Chungnam National University

<sup>1</sup>Department of Regional Environment, Fukui University

A taxonomic study of the genus *Anisotoma* Panzer in Korea is presented. Members of *Anisotoma* can be characterized by combination of: body form convex to hemispherical, antennomere 8 distinctly smaller than antennomeres 7 and 9, apically clubed five-antennomeres, head narrowed behind compound eyes, 5-5-4 male tarsal formula, 5-4-4 or 4-4-4 female tarsal formula, elytra with 8 or 9 punctate interneurons. *Anisotoma curta* (Portevin) recorded by Angelini (1992) from Pyeongan (northern Korea) was the first Korean *Anisotoma* species. Three additional species [*A. frontalis* (Portevin), *A. rubromaculata* Hisamatsu, and *A. smetanai* Angelini and De Marzo] are reported for the first time in Korea. A key, descriptions, and drawings of diagnostic characters of known Korean *Anisotoma* species are presented.
