LBS Application Matrix

Performance issues:	Overloads network	Does not scale	Costly Throughput	Needs more intelligence
Key LBS Apps				
Enterprise				
Semantic Routing		✓	✓	
Real-time Re-routing	✓	✓	✓	✓
Intelligent Location Profiling/Geofencing				✓
Asset Tracking	✓	✓	✓	
Consumer				
Safety Tracking	✓	✓	✓	
Merchant Finder		✓	✓	
Wireless Advertising	✓	✓	✓	✓
Buddy Finder	✓	✓	✓	✓
Calendar Reminders	✓	✓	✓	
Privacy	✓	✓	✓	
Data Sales				
Road Speed	✓		✓	✓
Retailer – Market Research			✓	✓

Location Intelligence

- 12 yrs of research by MIT & Berkeley Professors and PhDs
- 2.5 years of Stealth Development
- Team members spearheaded large-scale software systems such as Oracle and SGI Irix OS
- Team combines top algorithmic expertise with leading experienced software development
- 10+ patents files
 - Computational geometry
 - Least-cost routing
 - Compression

Engineering Team

- 125+ years of development experience
- 40+ years of software management experience
- Custom hired for location intelligence
- Managers have 6-9 years experience leading software development teams

Phil Klein, Ph.D. – Chief Scientist

- MIT CS PhD. Full Professor, tenured at 32. Fellow at Harvard, Princeton.
- Experience with Xerox PARC, NEC, BBN, AT&T Labs, Nortel.
- Optimization guru; 25 years of computer science and development.

Compression Prediction Combinatorial Optimization Efficient Algorithms Computational Geometry

Scott Hotes, Ph.D. – VP Engineering

- Silicon Graphics – built IRIX OS network management & security.
- National Security Agency – built pattern recognition software.
- 10 years leading software teams, dozens of developers. Berkeley Ph.D.

Machine Learning Event-driven Computing Compression Algorithms

Saurabh Sethia, Ph.D. – Algorithms Scientist

- PhD in Computational Geometry & CS, Ranked 5th in India.
- Increased Voronoi diagram computation speed by 20-30x.

Computational Geometry

David Blackston, Ph.D – Compression

- Ph.D in Computer Science from Berkeley CS
- Graduated 1st in class from MIT Mathematics
- Ranked 11th on worldwide Putnam Math Olympics

Todd Hodes Ph.D – Wireless Handset Performance and Trigger Services

- Ph.D in Computer Science from Berkeley
- Developed dynamic location trigger-based technology

Selected Development Team

Jef Poskanzer

- built world's fastest web server
- 4th largest web-server

Keshav Byri

- Top 0.5% in India CS
- 4 years GIS experience

Tomi Vrijicak

- Highest distinction from McGill (#1 school in Canada)
- Dual Honors in CS and Math (3.9 GPA)

Joel Susal

- UPenn CS Summa Cum Laude (3.8 GPA)
- #1 in Penn Engineering contest for wireless wishlist software

Jesse Myers

- #1 CS grad from Brown (3.95 GPA)

Engineering Team

• In addition to the science/algorithmic expertise, WaveMarket team includes some of the leading core developers in Silicon Valley

Jeff Pozkanzer

- Built the world's fastest web server and 4th largest in terms of market share
- Worked on the kernel of SUN Solaris OS – the most scalable software
- Open source legend who has won many development awards. 20 years of development experience in Silicon Valley

Scott Hotes

- 10+ years as one of key developers and leads of SGI kernel IRIX OS
- Built software scalable to 300M for machine learning with the US Department of Defense

Ron Gutman

- Individually built the Informix Spatial product which has been one of their most successful products -- installed in over 1000 customers including leading wireless operators like DoCoMo, ATT
- Built the entire Airflash location middleware which has been installed in operators such as Singapore Tel, France Telecom/Orange, T-Mobile
- Has been published in Dr. Dobbs as the leading authority on Location-based services

Richard Fromm

- Was the key developer of Inktomi's search engine along side CTO Paul Gautier (they were classmates at Berkeley)

Andrew Cohen

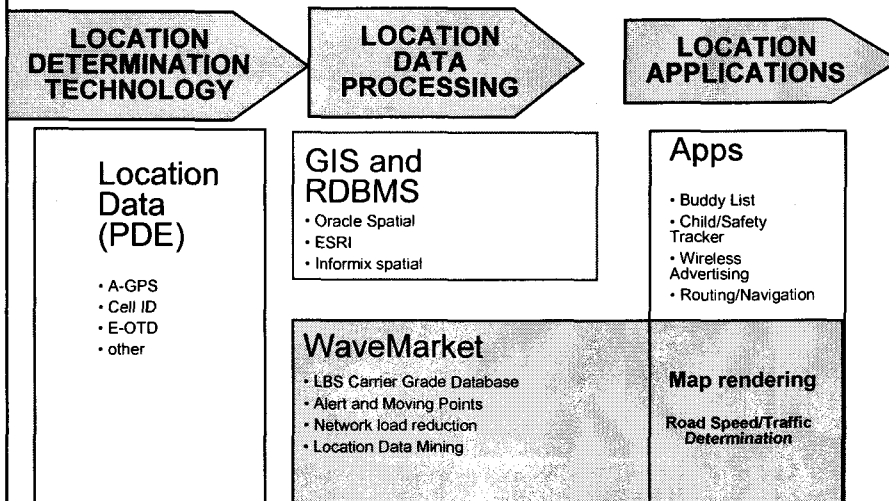

- For 8 years, One of the lead developers of the core of Oracle RDBMS. Spearheaded CISCO e-commerce rollout.

•Ron Lawrence

- Installed Signalsoft location suite services and infrastructure for T-Mobile, Compaq, Sprint PCS, Orange

Where we fit in with LBS

©1999-2002 WaveMarket, Inc. info@wavemarket.com
 Proprietary and Confidential. Do not distribute outside of your organization.

“Location” is the only means of communication to drive penetration rates – New applications and devices

Advanced European Nations have 65% wireless penetration rates.

Location services push penetration rates to 150%+ by introducing innovative applications capturing the power of “where”

Alert Services provides time-sensitive and actionable information for things you care about

- Child/Elderly Tracker ➤ When child/elderly are entering danger
- Car theft system ➤ To be awoken at night when car is traveling away from the house
- Buddy List ➤ Know your friend is close by
- Emergency Alert ➤ Know when an emergency event (bomb/fire) is happening near by
- Traffic Alerts ➤ When traveling towards a heavy-traffic zone
- Enterprise Fleet Services ➤ When fleet driver has spend too much time at the customer site or is traveling in the wrong direction
- Wireless Advertising ➤ Get a meaningful coupon from a local retailer

Polling Server

**Reduces
Network Load
90%+**

©1999-2002 WaveMarket, Inc. info@wavemarket.com
Proprietary and Confidential. Do not distribute outside of your organization.

Too Much Load

**1 Alert
Application**

update every 5 minutes
= 12 pings/hour

288 Pings per day

x End Users

10 Million subscribers

Total Pings

1.0 Trillion /year

Peak Load

4 Million /min

©1999-2002 WaveMarket, Inc. info@wavemarket.com
Proprietary and Confidential. Do not distribute outside of your organization.

- Polling Server Functionality
 - Load Reduction
 - » Reduces location requests through intelligent algorithms
 - Constraint-based Optimization
 - » Will maximize value for given load constraint, for example location server max of 150 requests/sec.
 - Location Request prioritization
 - » For example, e911 or safety requests will get priority over less critical such as wireless ad.

Moving Points Problem

City Map

-  Dangerous Area
-  Downtown Area

Situation in dealing with many moving points/subscribers

- Continuous tracking of moving (dynamic) points
- Points moving along spatial plane and street grid
- Moving points that are related to each other and have dynamic triggers (eg. buddy lists) and static triggers – eg. Send an ad if near coffee shop x.
- Moving points have Moving points have criteria they must match – eg. Looking for Chinese Restaurant close to park

• **Processing requirement grows exponentially with number of subscribers**

• **Impossible to manage all applications!**
