

Light Curve Analysis of CC Com

Kang Hwan Lee, Jang Hae Jeong

Dept. of Astronomy & Space Science, Chungbuk National University

In the spring of 2002, CCD observations of the W UMa type eclipsing binary system CC Com are made using 61-cm telescope of Sobaeksan Astronomical Observatory. From our data complete BVRI light curves are constructed and 4 times of minima are determined. Period study and light curve analysis are presented.
