One *Pardosa* sp. from Mt. Ungil (Araneae, Lycosidae)

Joo-Pil Kim and Jung-Sun Yoo

(Department of Biology, College of Natural Sciences, Dongguk University, Seoul
100-715, Korea)

The male of *Parodsa* sp. is described, illustrated, and distinguished from related species. This species closely resembles *Pardosa astrigera* L. Koch, 1878 in external appearance but shows differences in structure of palpal organ, especially median apophysis.

Key words : Lycosidae, *Pardosa* sp. Korea.
