Latest Trends on BT Products Development and Regulatory Policy

Moo-Young Yoo

Division of Biopharmaceuticals, KFDA

BT(Biotechnology) is transition stage from study and technology to mass production and one of most promising part in leading industry.

After early completion of genome project, many countries keep trying their best to preoccupy in this field. Korean government support BT more than 10 years.

Because their eco-compatibility and cleanness, BT is very promising part. But the big issue is the morals of genetic manipulation.

Domestic industry is well developed with the supporting of government, cartilage cell self-origin and epidermal cell self-origin is leaning item.

But the problem to be solved is keep supporting in many way, and safety evaluation.

This presentation will show the problem related BT product development and regulatory trend.
