

Chinese Fluid Machinery Society and Technology in 21 Century

Xue Shengxiong*

ABSTRACT

Fluid machinery is called “general machinery” in China because of its extensive usefulness. There are eight speciality committees in Chinese Fluid Machinery Society and they are: pump, valve and pipeline, fluid sealing, compressor, blower, waterjet equipment, refrigerating machinery, filtration and separation machinery. Every speciality committee takes charge of all trades products with standard drawing up, quality detection and trade managing. The society publishes the monthly issue 《Fluid Machinery》 and holds international/domestic conferences and fairs. This paper introduces the society works of recent years, and shows some typical products. These products confirm to KFMA, they are: pump, valve, sealing, compressor, blower and waterjet technique. In the last this text will approach the society cooperation between Korea and China, market and product complementation. Congratulate 2004 KFMA Annual Meeting with this text!
