Harbin, 150040, Heilongjiang, China

During the course of the study on the the family Tortricidae in the Northeast China, we found six newly recorded species of the genus *Ancylis* H. from China. Morphological characteristics of them are briefly redescribed with illustrations of adults and genitalia. Also the known biological informations and distributional ranges for the species are mentioned.

The newly recorded species are as follows:

1. *Ancylis mandarinana* Walsingham, 1900 (Neimenggu)
2. *Ancylis melanostigma* Kuznetsov, 1970 (Heilongjiang)
3. *Ancylis partitana* (Christoph, 1881) (Neimenggu)
4. *Ancylis repandana* Kennel, 1901 (Heilongjiang)
5. *Ancylis uncella* ( [Denis et Schiffermuller] , 1775) (Neimenggu)
6. *Ancylis upupana* (Treitschke, 1835) (Heilongjiang, Neimenggu)

\* The name of the provinces in the parenthesis indicate the collecting localities.
