Department of Chemistry, Dong-A University

Nortropinones have received a great deal of attention because of their remarkable pharmaceutical significance and mono-, disaccharides derivatives have received low side effect and anti virus agent in living body. Synthesis of nortropinone derivatives were obtained by treatment of aromatic, aliphatic diamine, 2,5-dimethoxytetrahydrofuran, and 1,3-diacetonedicarboxylic acid. And synthesis of saccharide derivatives were obtained by treatment of amine derivatives and saccharide (glucose, mannose, or galactose) in anhydrous methanol.

So we synthesized nortropinone derivatives and saccharide derivatives.

Also we are studying about nortropinone derivative with saccharide.
