First Zoea of *Liomera bella* (Crustacea: Decapoda: Xanthidae) Hatched in the Laboratory

Hoi Jeong Yang and Hyun Sook Ko*

Department of Biological Science, College of Natural Sciences,
Silla University, Busan 617-736, Korea

The first zoea of *Liomera bella* belonging to the subfamily Liomerinae is described and illustrated for the first time. Its morphological characteristics are compared with those of other known species of the Xanthidae. The general morphology of it corresponds well with zoeas of the Xanthidae. Based on the zoeal morphology, the zoea of *L. bella* shows a greatest affinity with those of *Xantho incisus* and *Pseudomedeus agassizii* by having the exopod of an antenna with 2 setae, the terminal segment of the endopod of the second maxilliped with 6 setae, and the fork of a telson with 1 stout and 1 smaller lateral spines.
