연구목적

남부지방에서 황금의 잣빛곰팡이병을 종자소독 방법으로 방제코자 시험하였다.

재료 및 방법

- 가. 공시품종 : 여천재래, 승주재래, 광양재래
- 나. 공시약제 : 성적참조
- 다. 파종기 : 6월 1일
- 라. 파종밀도 : 30×10cm 점파
- 마. 시비량(kg/10a) : N-P₂O₅-K₂O = 6-9-6
- 바. 시험구배치법 : 분할구배치 3반복

결과 및 고찰

This study was conducted to evaluate the control effect of fungicides on control of Gray mold, growth characteristics, and root yield in the cultivation of *Scutellaria baicalensis* after barley cropping. All fungicides treated had no effect on the growth and flowering rate of *Scutellaria baicalensis*.

All seed disinfectant, treated had no effect on the growth and flowering date of *Scutellaria baicalensis* Georg. The major seed disinfectants were benomyl Wp, 20%, Captan Wp, 50%, Hymexazol Ec, 30%, Carboxin D, 37.5%. Dry root yield were increased largely with benomyl Wp, 20%, seed disinfectant than the other seed disinfectants had no injury with standard dosage.

On the other hand all seed disinfectants had slight injury in the double dosage level for the *Scutellaria baicalensis* Georg.
