

Development of health functional food and functional cosmetics from natural products

**College of Pharmacy, Kyung Hee University
Se-Young Choung**

Abstract

Vaccinium uliginosum L. (VU) is a flowering plant in the genus *Vaccinium* has berry fruit. This study was performed to investigate the effect of water extract of *Vaccinium uliginosum L.* and fractions on inhibition of melanogenesis and wrinkle formation. One hundred grams of the *Vaccinium uliginosum L.* was extracted with 2,000 mL of water (90 °C, 16h, 2 times). The water extracts were lyophilized and stored at 4 °C until used. *Vaccinium uliginosum L.* extracts showed scavenger activities on DPPH radical, superoxide anion radical, hydroxyl radical, hydrogen peroxide and singlet oxygen radical, dose dependently. And VU extract and fractions reduced melanin contents on B16F10 melanoma and inhibited the expression of melanogenesis-related proteins, tyrosinase, tyrosinase-related protein (TRP-1) and dapachrometamerase (Dct, TRP-2).

Moreover VU extract and fractions stimulated procollagen production and inhibited MMP-1 production in human fibroblast. And it decreased degree of wrinkle formation in hairless mouse skin that induced by UVB irradiation for 9 weeks.

From the above results, it is possible that *Vaccinium uliginosum L.* may be developed to be the health functional food and functional cosmetics that have anti-melanogenesis and anti-wrinkle effect.

Vaccinium uliginosum L.

들쭉 (*Vaccinium uliginosum*)

철쭉과 (Ericaceae)

들쭉나무의 열매

천연기념물 461호

자생지 : 백두산, 일본, 유럽 일대의

고원, 한대에 분포

- ◆ 효능 : 모세혈관 강화작용, 혈당 저하, 대장암 예방, 피로회복, 정혈작용, 이뇨작용, 정력증강, 해열작용, 원기제고, 류마티스 관절염 및 통풍에 효과
- ◆ 효능성분 : 플라보노이드, 안토시아닌, 우르솔산, 사과산, 전화당, 자당

Anti-melanogenesis effects of *Vaccinium uliginosum L.* extract and fractions

- The tyrosinase inhibitory activity
- The measurement of melanin contents on B16F10 melanoma cell
- The expression of melanogenesis-related protein on B16F10 cell

Mechanism of melanogenesis

Scheme of melanosome maturation

Tyr=tyrosinase, TRP=tyrosinase-related protein, Dct=dopachrome tautomerase,

DHI=5,6-dihydroxyindole DHICA=5,6-dihydroxyindole-2-carboxylic acid
(DHI/DHICA= unit of eumelanin)

Total melanin contents

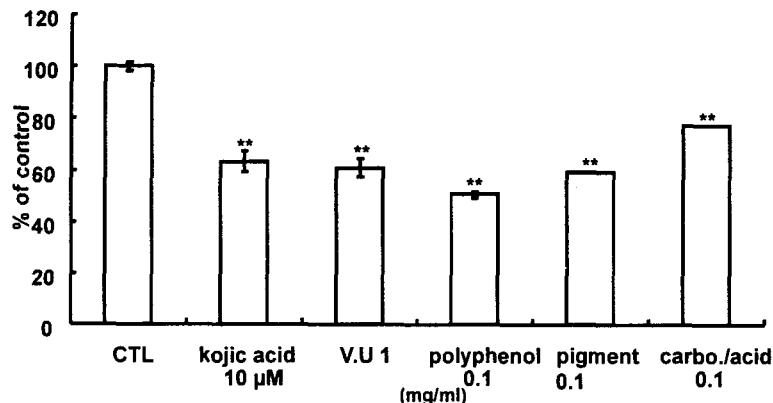

Fig. 7. Total melanin concentration in B 16 melanoma cells treated with extracts of *Vaccinium uliginosum L.* and fractions.

(V.U = Extracts of *Vaccinium uliginosum L.* extract)

Letters (alphabets) different superscripts are significantly different ($p<0.01$) among the groups by Duncan's multiple range test.

Tyrosinase inhibition activity

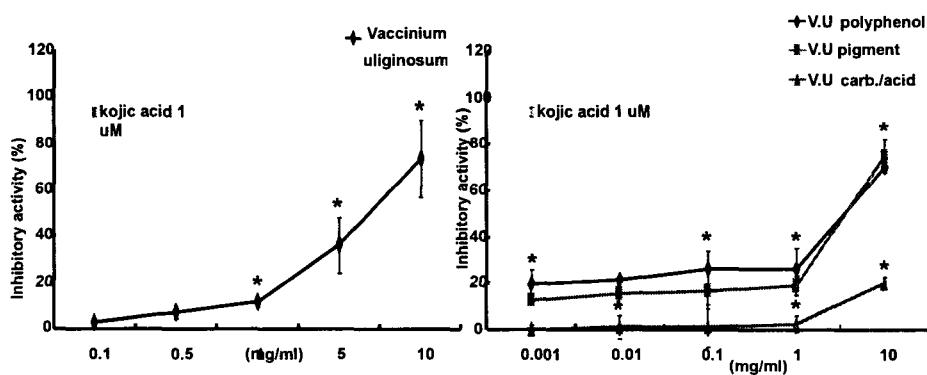

Fig. 6. Tyrosinase inhibition activity assay of *Vaccinium uliginosum L.* extract and fractions.

**Anti-wrinkle effects of (hairless mouse)
Vaccinium uliginosum L. extract**

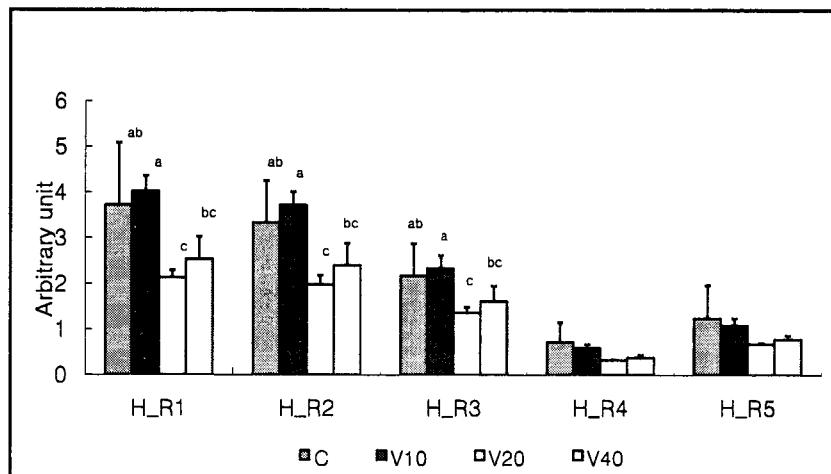

Oral administration

No UVB	Normal
UVB 조사군	UVB + Control
	UVB + <i>Vaccinium uliginosum</i> 10mg/kg
	UVB + <i>Vaccinium uliginosum</i> 20mg/kg
	UVB + <i>Vaccinium uliginosum</i> 40mg/kg

Oral administration schedule

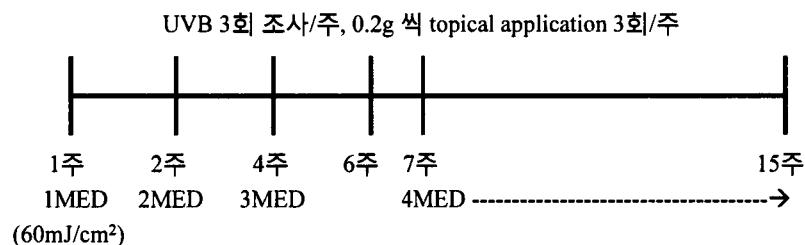

Wrinkle degrees of hairless mouse administrated extracts of *Vaccinium uliginosum L.* by computerized digital image analysis system on 9 week.

Letters (alphabets) different superscripts are significantly different ($p<0.05$) among the groups by Duncan's multiple range test.

Topical application

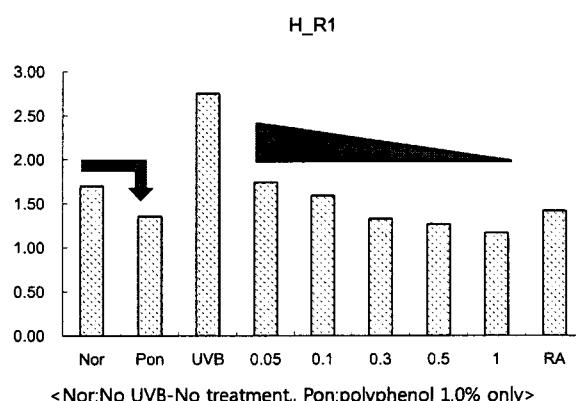

No UVB 조사군	Normal	
	Positive control (retinol acid 2500IU)	
	Polyphenol 1.0%	
UVB 조사군	UVB-induced wrinkle formation	
	UVB + polyphenol 0.05%(v/v)	
	UVB + polyphenol 0.1%(v/v)	
	UVB + polyphenol 0.3%(v/v)	
	UVB + polyphenol 0.5%(v/v)	
	UVB + polyphenol 1.0%(v/v)	
	Vehicle (cream only)	

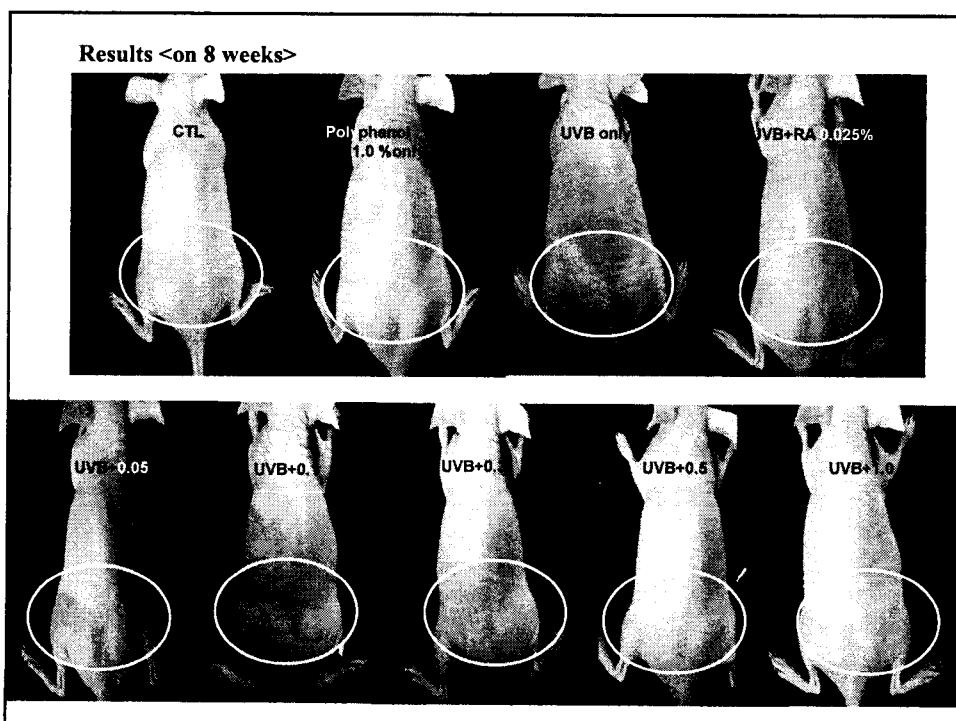

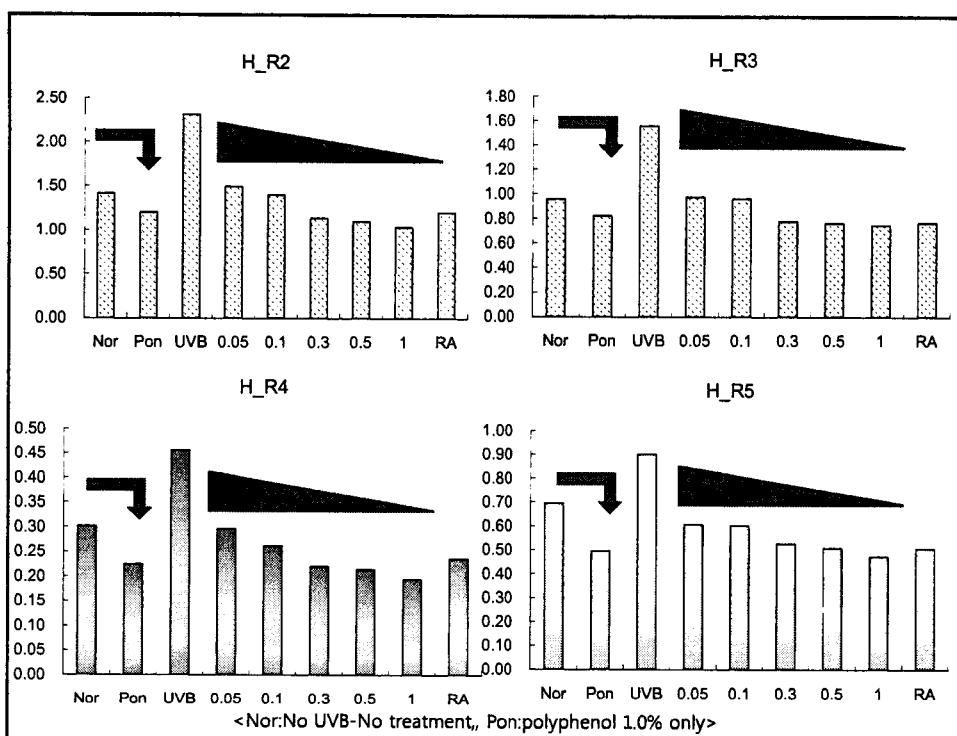

Topical application schedule

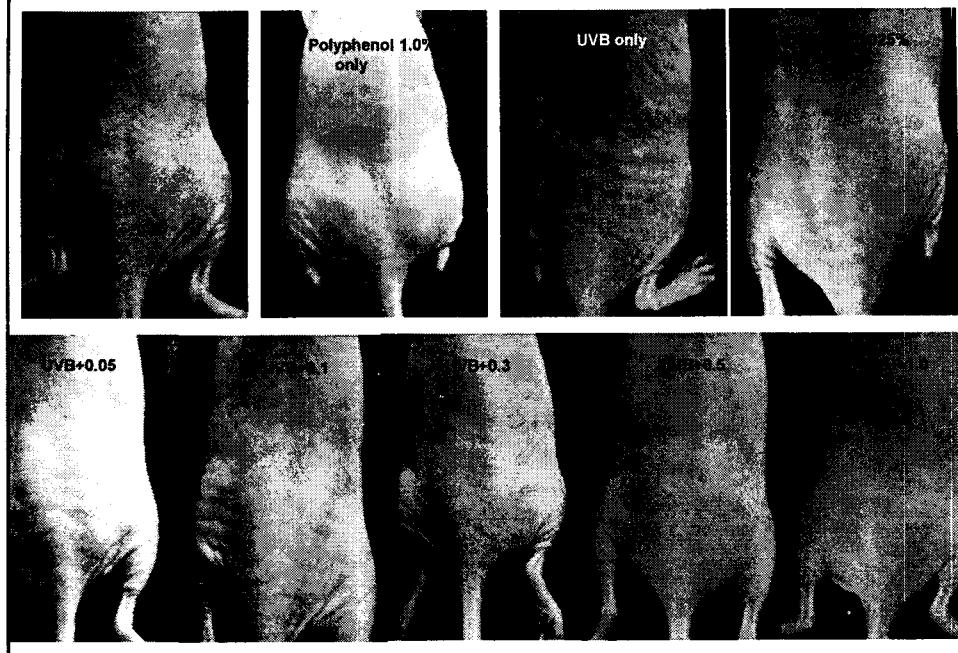

Results of standard sample-Topical application

- ◆ The data analized into 5 different factors of skin fold thickness and roughness.
 - H_R1~3 means the depth of the wrinkle.
 - H_R4 means the roughness of the skin.
 - H_R5 means the depth of the narrow wrinkle.
- ◆ The lower value of data means the thin and narrow wrinkle was formed and the skin surface is flat.

Results <on 15 weeks>
