

Notes on the Nomenclature of Some Microlepidoptera in Korea (I)

Kyu-Tek, Park*

한국산 미소 나방류의 학명 변경에 관하여

朴 奎 澤*

(接受: 1975. 12. 3)

Abstract

The writer adopted the new correct scientific names of 46 Microlepidoptera previously incorrectly recorded in "A List of Plant Diseases, Insect Pests and Weeds in Korea," published by the Korean Society of Plant Protection in 1972 and "Nomina Animarium Koreanorum Insecta," by the Zoological Society of Korea in 1968.

Introduction

In the present paper, only Torticidae, Yponomeutidae and some families of Microlepidoptera are treated, and additional studies will be published next. The writer visited the British Museum (Nat. Hist.) in London, Hokkaido University and the University of Osaka Prefecture in Japan to identify Korean Lepidoptera from Sept. 1974 to July, 1975. I wish to express my sincere thanks to Mr. P.E.S. Whalley and Dr. K. Sattler, Dept. of Entomology, British Museum (Nat. Hist.) and Dr. J.D. Bradley, Commonwealth Institute of Entomology, London, and Dr. T. Kumata, Institute of Entomology, Hokkaido University, Dr. H. Kuroko, Dr. T. Yasuda, Dr. S. Moriuti, Entomological Laboratory, the University of Osaka Prefecture, for their helpful advice in Japan. I am most grateful to Dr. P.C. Lippold, Consultant of Plant Protection Research and Training Project, FAO/UNDP in Korea for his advice.

1. *Acrolepia manganeutis* Meyrick; Tineidae :

Acrolepiopsis sapporensis (Matsumura, 1931); This species was formerly misidentified as *Acrolepia manganeutis* M., but Moriuti (1961) redescribed it under the name of *A. alliella* Semenov et Kuznetsov. He (1975) also sanked this to junior synonym of *sapporensis* which belongs to *Acrolepiopsis* Ga-

edike. Several additional species of this genus occur in Korea.

2. *Acrolepia shittakei*; Plutellidae

This name is very confused; it is probably an invalid name.

3. *Cerostoma sasakii* Matsumura, ; Plutellidae:

Ypsolophus sasakii (Matsumura, 1917)

Unfontunately, I have not seen this species in Korea to date.

4. *Plutella maculipennis* Curtis; Plutellidae:

Plutella xylostella (Linnaeus, 1758)

J.D. Bradley (1966) reported that *maculipennis* is a junior synonym of *xylostella*.

5. *Hyponomeuta polystigmella* C; Hyponomeutidae:

Yponomeuta polystigmellus C. et R. Felder,

1862: Yponomeutidae:

This species is superficially very similar to *polytictus* and *sociatus*. The genus *Yponomeuta* was confused before because they were very similar to one another in superficial characters, and were misidentified in many cases.

6. *Yponomeuta polysticta* Butler; Yponomeutidae:

Yponomeuta polystictus Butler, 1879.

Yonomeuta evenymellus was roughly described by Matsumura in 1917. But the type specimen was not

7. *Yponomeuta evonymella* Linnaeus ;Plutellidae

*Dept. of Entomology, Institute of Agricultural Sciences, Office of Rural Development, Suweon, Korea

1) The name follows after colon(:) is newly adopted scientific names.

Ypnoneuta evenymellus was roughly described by Matsumura in 1917. But the type specimen was not been found in his collection, and has never appeared in the Japanese literature. According to Moriuti (1972 : 14), *evenymellus* is identical with *polystictus*.

8. *Acroceops astaurota* Meyrick; Lyonetiidae:
Spulerina sp.

Japanese species differ from *astaurota*, and it should be a new species belonging to the genus *Spulerina* (T.kum ata 1975, in Manu.) Judging from it's geographical distribution, I conider Korean species is not *astaurota*.

9. *Tischeria complanella* Hübner; Tischeriidae:
Tischeria ekelladela Bjaerkander, 1795. syn.=
complanella Hübner, 1827, =*comparella* Henrich-Sohaffer, 1855.

10. *Tischeria dodonaea* Stainton; Tischeriidae:
Tischeria sp.

The species which is occuring in Japan and Korea differs from European species, *dodonaea* Stainton. It is probably a new species of genus *Tischeria* (T. Kuroko, 1975. in Manu)

11. *Lithocolletis malivorella* Matsumura; Gracilariidae,
Lyonetia prunifoliella Hübner; Lyonetiidae: *Lyonetia prunifoliella malinella* (Matsumura, 1906);
Lyonetiidae.

This subspecific name was newly combined through comparison of the genitalia of *prunifoliella* Hübner with those of *malinella* Matsumura by H. Kuroko (1964). It differs from the nominate race of Europe.

12. *Lithocolletis ringoniella* Matsumura; Gracilariidae
: *Phyllonorycter ringoniella* (Matsumura, 1931)

The generic name *Lithocolletis* was changed to *Phyllonorycter* because of its priority by J.D. Bradley (1966).

13. *Kakivoria flavofasciata* N.; Cosmopterygidae:
Stathmopoda masinissa Meyrick, 1906.

syn. =*albidorsis* Meyrick. F. Kasy (1973) reported that *flavofasciata* is a junior synonym of *masinissa* Meyrick and S. Moriuti reviewed it in 1974.

14. *Pectinopora gossypiella*; Saunders; Gelechidae
: *Platyedra gossypiella* (Saunders, 1848)

The genus *Platyedra* Meyrick, 1895 has priority over the genus *Pectinophora* Busk 1917.

15. *Carposina coreana* Kim; Carposinidae: This species was described from Korea by Kim (1955) in a Korean journal, but unfortunately it was not adopted. At present this name has been treated as an invalid name

16. *Adoxophyes privatana* Walker; Tortricinae

The species of genus *Adoxophyes* in Korea has been very confused. According to T. Yasuda, *privatana* probably does not occur in Japan and Korea. The Korean species are suspected to be *A.orana fasciata* Walsingham, 1900 and a species (Kwang Neung, S.W. Park's coll.) is similar to *A.congruana* Walker, but differing from the former.

17. *Cacoecia berviplicana* Walsingham; Tortricinae
: *Archippus breviplicanus* (Walsingham, 1900)

This name was newly combined by Kawabe (1965). Species of the genus *Archippus* can be distinguished from *Archips* by the shape of the costal fold and by ecological differences.

18. *Cacoecia circumclusana* Christoph ; Tortricinae
: *Ptycholoma lecheana circumclusana*

(Christoph, 1881) This subspecific name was newly combined by Kuznetsov (1967) and reviewed by T. Yasuda (1975).

19. *Cacoecia crataegana* Hübner, ; Tortricinae
: *Archips crataeganus* (Hübner, 1719)

Cacoecia Hübner (1826) is synonym of *Archips* Hübner, (1822) according to the law of priority. Japanese species described as new subspecies, *endoi* by T. Yasuda in 1975, but I consider the characters of Korean species should be studied in more detail to determine the subspecies.

20. *Cacoecia criticana* Kennel; Tortricinae: This is a junior synonym of *Archippus blevipircanus* Walsingham.

21. *Cacoecia fuscocupreana* W. ; Tortricinae
: *Archips fuscocupreana* Walsingham, 1900

22. *Cacoecia ingentana* Christoph; Tortricinae
: *Archippus ingentanus* (Christop, 1881) This name was newly combined by Kawabe (1965).

23. *Cacoecia longicellana* Walsingham; Tortricinae
: *Hoshinoea longicellana* (Walsingham, 1900)

The genus *Hoshinoea* was described by Kawabe (1965) and newly combined. This genus is easily distinguished from the genus *Archips* or *Arch*

- ppus* by the nervation of male forewing and characters of the genitalia.
24. *Cacoecia piceana* Linnaeus ; Tortricinae :
Archippus piceanus similis (Butler, 1879) A.
similis was described from Japan by Butler and was first recorded from Korea (Leech coll. Busan. 1866) by Walaingham (1900)
25. *Cacoecia xylosteana* Linnaeus ; Tortricinae : *Archips xylosteanus* (Linnaeus, 1758)
26. *Tortrix nigricaudana* Walsingham ; Tortricinae : *Archips nigricaudana* (Walsingham, 1900)
This species was described from Korea (Weonsan, 1886, Leech coll.). Holotype is deposited in B.M. (Nat. Hist.)
27. *Archips asiatica* Walsingham ; Tortricinae : *Archippus asiaticus* (Walsingham, 1900),
28. *Cornicacoecia lafauriana* Ragonot ; Tortricinae : *ssp. inornatus* Walsingham, 1900
Walsingham described *Archips inonatus* from Leech's collection (Korea. Weonsan, 1886). I consider this should be a subspecies of *lafauriana*.
29. *Capua grotiana* Fabricius ; Tortricinae:
Epagoge sp.
At present the genus *Epagoge* consists of four species in Japan, Japanese species differs from European species *grotiana*. One Korean species determined to be *Epagoge hoshinoi* (Kawabe, 1964) which was newly combined by Yasuda (1975).
30. *Pandemis ribeana* Hübner ; Tortricinae : *Pandemis cerasana* (Hübner, 1786)
31. *Tortrix dumetana* Treitschke ; Tortricinae : *pandemis dumetana* (Treitschke, 1835)
32. *Cacoecia semialbana* Guenek ; Tortricinae : *Clepsis rurinana* (Linneaus, 1758)
33. *Cnephasia argentana* Clerk ; Tortricinae : *Eana (Ablabia) argentana* (Clerk. 1759)
34. *Acleris boscana* Fabricius ; Tortricinae : *Acleris boscana ulmicola* (Meyrick, 1930)
T. Yasuda treated *boscana* F. as a nonsynonym of *ulmicola* M. in 1965, but he recombined *ulmicola* to a subspecies of *boscana* in 1975.
35. *Peronea crocopepla* Meyrick ; Tortricinae : *Acleris crocopepla* (Meyrick, 1922)
I consider this species should be studied in more detail.
36. *Argyrotoza leechi* Walsingham; Tortricinae : *Croecialechi* (Walsingham, 1900)
This species was described from Korea (Type: Weonsan, 1886. Leech coll.)
37. *Argyroploce acharis* Butler ; Olethreutinae : *Saliciphaga acharis* (Butler, 1879) The genus *Saliciphaga* was described by Fal'Kovich (1962)
38. *Argyroploce branderiana* L. ; Olethreutinae : *Pseudocaphila branderiana* (Linnaeus, 1758)
39. *Exartema mori* Matsumura; Olethreutinae, : *Oletheres mori* (Matsumura, 1900)
This name was newly combined by A. Diakonoff (1953)
40. *Exartema transversana* Ch.; Olethreutinae : *Cymolomia transversana* (Christop, 1881)
41. *Extrema morivora* Matsumura ; Olethreutinae : *Cymolomia morivora* (Matsumura, 1900)
42. *Oletheretes schreberiana* L. ; Olethreutinae : *Oletheres (Argyroploce) schreibiana* (Clerk, 1759)
O. schreberiana Linn. is a junior synonym of *schreberiana* Clerk.
43. *Petrova insignis* Heinrich ; Olethreutinae : *Petrova cristata* (Walsingham, 1900)
44. *Rhopobota naevana* Hübner ; Olethreutinae : *Acroclita naevana* (Hübner, 1811-17)
45. *Grapholita glycinivorella* Matsumura ; Olethreutinae: *Leguminivora glycinivorella* (Matsumura, 1900)
46. *Rhyacionia turionana* H. bner, ; Olethreutinae: *Blastesthis turionella* (Linnneaus, 1758)

적  요

현재 우리나라에서 기록되고 있는 나방류의 학명은 그 상당수가 오래된 옛 학명들로 틀리게 사용되고 있거나, 잘못 분류 등정되어 기록되고 있는 경우가 많으므로 이의 개정 사용이 시급한 일이라 사료된다. 필자는 우선 현행 명예 중 잡초병감 (한국식물보호학회, 1972) 및 한국 동물명집 곤충편 (한국동물학회, 1968)에 수록된 해충들 중 잘못 기록된 미소 나방류 46 종에 대해 국제명명규약 (International Code of Zoological Nomenclature)에 의해 채택되고 있는 새로운 학명으로 개정 발표한다.
