摘要

著者は 1980年 7月 24日부터 29일까지 巨文島의 古島 (24日, 25日), 西島 (26日, 27日, 28日), 東島 (29日)에서 採集한 거미類 2,000餘 個體를 調査, 整理한 結果 韓國 未記錄種 2種 (*Cyrtarachne nagasakiensis*, *Menemerus confusus*) 을 包含한 63種을 얻었다. 이로서 白 (1937), Saito (1941), 및 南宮 (1978) 등에 依하여 이미 報告된 것과 합쳐 巨文島의 거미는 都合 21科, 51屬, 67種이 된다.

INTRODUCTION

Geomun island consists of Go-do, Dong-do, Seo-do and some small islets, which belong to Samsan-myeon, Yeocheon-gun, Chollanam-do.

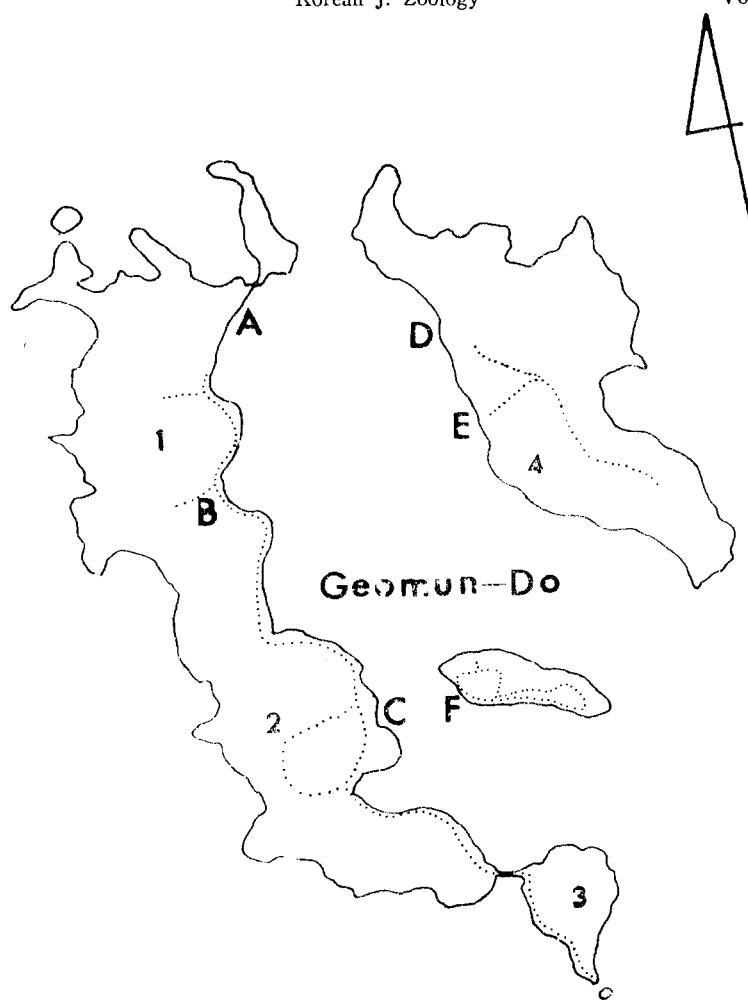

Twenty three species of spiders had been reported from Geomun island by Paik (1937), Saito (1941), Paik and Kim (1956) and Namkung (1978). The author adds 40 species to previously reported 23 species of spiders, including two unreported species from Korea: *Cyrtarachne nagasakiensis* and *Menemerus confusus*.

The author wishes to express the best gratitude to Dr. Kap Yong Paik who has helped in the identification of specimens. The author is also indebted to Mr. Eok Soo Seo who assisted him in collecting specimens.

Male; BL 1.94, CL 0.92, CW 0.81, AL 1.17, AW 1.31, SL 0.48 SW 0.43, LBL 0.14, LBW 0.19, EDL 0.22, EDW 0.15, CPW 0.58, AER 0.58, PER 0.61. Leg I 2.53,

(0.83, 0.34, 0.61, 0.46, 0.35), II 2.33 (0.75, 0.34, 0.53, 0.43, 0.32), III 1.53 (0.50, 0.24, 0.29, 0.26, 0.27), IV 1.92 (0.66, 0.29, 0.44, 0.34, 0.26), Palp (0.26, 0.13, 0.08, —, 0.31)

Description: *Female*; Carapace yellowish brown, with faint grey reticulated pattern; convex. Cephalic width index 67. Both eye rows recurved respectively, and the laterals contiguous. Median ocular quadrangle wider than the length (27:32) and slightly wider in front than behind (27:25). Eye ratio, AME=PME>ALE=PLE (10:10:7:7). Anterior median eyes 1.3 diameter apart, 2.5 diameter from laterals. Posterior median eyes one diameter apart, 3.1 diameter from laterals. Eye area index 94. Eye row index 95. Clypeus as high as the diameter of AME.

Chelicerae yellowish brown; rather stout, the index 53; armed with three teeth on both margins. Endite and labium yellow-brown, endite index 89, the converging index 50. Labium wider than the length in the index 141; with basal articular notches about one-third its length. Sternum yellow-brown; triangular, slightly wider than the in the index 103; anterior margin recurved; the end protruded between the 4th coxae.

Legs yellowish brown; leg formula, 2, 1, 4, 3. Leg formular index, 100:102:69:98. Leg I/C 2.33, Fem. I/C 0.76. Fem. I 1/d 4.00, Tib. I 1/d 5.4, leg I Pat.+Tib. /C 0.87.

Abdomen triangular, wider than the length in the index 141; two-thirds of anterior dorsum dark-grey, which include one broad whitish yellow transversal stripe; the posterior part clear golden yellow. Anterior part of dorsum with many muscle-impressions.

Epigynum and genitalia as illustrated in Figs. 4, 5, 6 & 7.

Male; Body much smaller and darker than female. Eye ratio, AME>PME>ALE=PLE (7:6:4:4). Anterior median eye 0.8 diameter apart, one diameter from laterals. Posterior median eyes 0.7 diameter apart, 1.8 diameter from laterals. The end of sternum protruded between the 4th coxae. Leg formula, 1, 2, 4, 3. Leg formular index, 100:92:60:76. Leg I/C 2.75, Fem. I/C 0.90. Fem. I 1/d 5.53, Tib. I 1/d 6.78. Leg I Pat.+Tib. /C 0.96. Abdomen yellowish brown, mottled with dark grey, and with small projections on dorsum.

Male palp as illustrated in Figs. 1, 2 & 3.

Specimens examined: 4♀♀ 1♂, Go-do, 3♀♀, Seo-do

Distribution: Japan and Tsushima

***Menemerus confusus* Boes. et Str., 1906 흰수염깡충거미 (진청)

Menemerus confusus Boes. et Str., 1906. p. 350, figs. 37, 146; Yaginuma 1974. p. 104, fig. 277

Measurements (mm): *Female*; BL 8.13, CL 3.18 CW 2.37, AL 5.20 AW 3.08, SL 1.46 SW 0.92, LBL 0.85 LBW 0.51, EDL 1.04 EDW 0.48, CPW 1.34, 1st ER 1.76, 2nd ER 1.63, 3rd ER 1.79. Leg I 5.28 (1.67, 1.06, 1.21, 0.83, 0.66), II 5.06 (1.57, 1.01, 1.11, 1.81, 0.71), III 5.41 (1.67, 0.96, 1.11, 1.06, 0.76), IV 6.97 (2.02, 1.11, 1.67, 1.41, 0.86). Palp 2.79 (0.95, 0.46, 0.51, —, 0.92)

Male; BL 6.52, CL 3.08 CW 2.42, AL 3.69 AW 2.37, SL 1.38 SW 0.97, LBL 0.63 LBW 0.53, EDL 0.83 EDW 0.58, CPW 2.02, 1st ER 1.71, 2nd ER 1.60, 3rd ER 1.75. Leg I 6.16 (2.02, 1.21, 1.41, 1.01, 0.71), II 5.46 (1.72, 1.06, 1.21, 0.96, 0.66), III 5.66 (1.67, 0.96, 1.16, 1.16, 0.91), IV 6.97 (2.07, 1.11, 1.62, 1.41, 0.92). Palp 2.75 (1.07, 0.43, 0.25, —, 1.08)

Description: *Female;* Carapace rather flat; brown black, covered with black brown and white hairs; margins hemmed with hairs. CI 75. PME separated 19 times their diameter. PLE separated 5.4 times their diameter. Median ocular quadrangle wider than the length (11:92), and very slightly wider in behind than front.

Chelicerae black; armed with two promarginal teeth and one retromarginal tooth. Labium and endite dark brown, pale tipped. Labium longer than the width in the index 63. Endite index 54, the converging index 49. Sterum muddy brown, covered long white hairs; elongated oval, the width of anterior margin less than that of labium; the end bluntly protruded, but not extended between 4th coxae. Palp brown, with long white hairs.

Legs brown, with two dark annulations on each segment. Leg formula, 4,3,2,1. Leg formular index, 100:101:107:141. Spination; femora I & II, dorsal 1-1, prolateral 0-1; III, dorsal 1-1-1, pro. and retrolateral 0-1; ventral spines of tibiae, I 2-2-1pe, II 1r-1pe, III & IV 0-2e.

Abdomen whitish grey, with complicated black dorsal marks and striking black band surrounded the dorsum; venter pale yellow.

Epigynum and genitalia as illustrated on Figs. 11, 12 & 13.

Male; Body rather smaller than the female. Coloration and structure essentially similar to female, but abdominal black dorsal marks more distinct.

Male palp as illustrated in Figs. 8, 9 & 10.

Specimens examined: 2♀♀ 2♂♂, Go-do

Distribution: Japan, Tsushima and Formosa

RESULTS AND DISCUSSION

- There have been reported 21 families, 52 genera, 67 species of spiders by Namkung, Paik, Saito and the author at Geomun island as shown in Table 1.
- The type-locality of two unreported species from Korea, *Cyrtarachne nagasakienesis* and *Menemerus confusus* is Japan, and there is a possibility that these can be found at other Southern islands of Korea
- Two Korean endemic species, *Coras vulgaris* and *Heteropoda koreana* were found in this investigation.

Table 1. Synopsis of the spiders from Geomun island

Family	Genus	Species	Family	Genus	Species
1. Dictynidae	1	1	12. Agelenidae	3	4
2. Segestriidae	1	1	13. Pisauridae	2	2
3. Oonopidae	1	1	14. Lycosidae	2	2
4. Scytodidae	1	1	15. Oxyopidae	1	1
