

Yoon's Attachment 開發로 美國, 日本, 獨逸等 3個國에서 特許取得

서울 鍾路에서 開業中인 尹漢哲會員이 刻苦 6年만에

Lock Attachment를 지난 73년에 開發 美國, 日本, 獨逸에서 特許를 얻어 韓國齒科界는 勿論 國際적으로 非常한 關心을 모았던 尹漢哲會員이 이번 또 다시 Yoon's Attachment로 韓國을 비롯한 美國, 日本, 獨逸等 特許를 獲得함으로써 從來의 共通된 欠點을 거의 完璧하게 補完한 開發品을 내놓게 되어 本格的으로 生産에 着手케 될 計劃이어서 國內外的으로 齒科臨床에 크게 寄與하게 될 것으로 期待된다. 이번 3個國의 特許 獲得을 契機로 하여 New York Times 등을 通해 積極的인 弘報活動도 展開할 것으로 傳해지고 있으며 本誌에서는 앞으로 몇차례에 걸쳐 Yoon's Attachment에 對한 開發課程과 研究內容을 紹介할 豫定으로 있다.

ABSTRACT
 The present invention provides a removable attachment for a partial denture having assembly with body member which is fit to the connector body thereof and a member including a slot having a relatively wide and a narrow slot or recess, in which a corresponding resiliently movable member can be slid, and a rack portion of slide, which has a major arc which is horizontal and as a right angle to the axis of teeth, and a slider member including a lock rod and a protruding member suitable for being retained in a notch of the body member and has an aperture which may be engaged by the lock rod. The slider member is actuated in motion by two protruders of which both have the function as a rigid latch when the waiter or user manipulates any foods and another function as a spring loaded rod when the waiter pushes out the slider member with his finger, and of which one is integrally formed on the individual portion of the mastication surface of natural tooth, and the other one is fixed to said individual movable member by a suitable method, for example, such as welding, soldering and etc. and is spring loaded about the body of the slider member, and by the hemisphere device to receive two protruders. 12 Claims, 17 Drawing Figures
