A STUDY ABOUT SUICIDAL ATTITUDE AND SELF-IMAGE IN ADOLESCENT SCHOOL GIRLS - FOCUSED ON INDUSTRIAL AND CULTURAL WOMEN'S HIGH SCHOOL FACTION -

Jun-Hyeong Kim, M.D., Bong-Jun Kim, M.D., Dong-Won Jang, M.D.

Department of Psychiatry, Chunchon National Mental Hospital, Chunchon

Objectives: The purpose of this study was to evaluate suicidal attitudes, self-image, anxiety and depression on industrial and cultural wemen's high school, and to make a comparative study between suicidal attitudes and anxiety, depression, self-image.

Methods: Three hundred twenty-six student (161 persons from industrial wemem's school, 165 persons from cultural wemen's school), who were supposed to different from in psychosocial environment, entered this study. To assess the attitudes toward suicide, Suicide Opinion Questionnaire (SOQ) were done at study. To estimate anxiety, depression, and self-image, Zung' Self-rating Anxiety Scale (ZAS), K-Beck Depression Inventory (KBDI), Offer's Self Image Questionnaire (OSIQ), respectively, were executed in this study.

Results: 1) We extracted 5 factors after factor analysis based on SOQ results with the response of the 326 subject; ethics, religion, mental illness, acceptability, revenge. Revenge factor were stastically significant between both groups. 2) In OSIQ, family relationship factor & superior adjustment factor were stastically significant between both groups, but, both groups didn't have a significance on ZAS & KBDI. 3) According to correlative analysis between SOQ results and OSIQ, ZAS, KBDI results, ethics factor(SOQ) were converse to BS factor, ET factor, and ME factor in OSIQ. Mental illness factor(SOQ) were in proportion to PP factor(OSIQ). Acceptability factor(SOQ) were in proportion to ZAS & KBDI result.

Conclusion: Our subject mostly regarded suicide as sinful ethically ,and as mental illness. But, In that there was neuropsychiatric history and suicidal idea in them, the subjects looked upon suicide as permissive. With significantly high score on ZAS & KBDI, there were more acceptable attitude toward suicide. So, We consider suicide to be used as coping strategy about more stressful event to young adolescent.

KEY WORDS: Adolescence · Suicide · Self image.
