# Studies on the Total Synthesis of Amphidinolide O. A Stereoselective Synthesis of C12-C17 Fragment 

Jin-Hyun Pang and Duck-Hyung Lee*<br>Department of (hemistry, Sogang linversity, Whinsoo-dong I, Mapo-kt, Seoul I21-742, Korea Received.Apill 1, 2002

Key words: Amphidinolide O, Cytotoxic macrolide, Stereoselective synthesis, Diastereoselective anti-aldol reaction

The amphidinolides are a series of cytotoxic macrolides isolated from the marine dinoflagellate Amphidinium sp.. which is a symbiotic with Okinawan marine flatworm Atmphiscolops sp. Amphidinolide O (1) exlibited in vitro cytotoxicity against L1210 and human epidermoid carcinoma KB cells (ICsin: 1.7 and $3.6 \mu \mathrm{~g} / \mathrm{mL}$. respectively). ${ }^{1}$ Several synthetic strategies for amphidinolide $\mathrm{A},{ }^{2} \mathrm{~B},{ }^{3} \mathrm{C} \cdot{ }^{1} \mathrm{G},{ }^{5}$ $\mathrm{H}^{5}$ and $\mathrm{L}^{56}$ have been reported to date and the total synthesis of three amphidinolides, J. ${ }^{*} \mathrm{~K},{ }^{*}$ and $\mathrm{P}^{9}$ was recently completed by Willians group. Herein. we describe the stereoselective synthesis of the $\mathrm{Cl} 2-\mathrm{Cl} 7$ fragment 3 of amphidinolide O (1) using a titanium-mediated diastereoselective anti-aldol reaction as a key step.
Retrosynthetically. the amphidinolide $O$ (1) can be bisected into two fragments: the $\mathrm{Cl}-\mathrm{Cll}$ fragment 2 bearing the epoxide and the hemiketal moieties and C12-Cl7 vinyl iodide fragment 3 (Scheme 1).
The synthesis of vinyl iodide fragment 3 started from chiral propionate ester 4 (Scheme 2). The ( $1 S, 2 R$ )-cis-1-( $p-$ methyl)benzenesulfonamido-2-indanyl ester 4 was prepared in 2 steps from commercially available optically active ( $1 S 2 R$ )-cis-aminoindan-2-ol. ${ }^{10}$ The titanium enolate of 4 was generated by the following sequence of reactions. i.e.. treatment of 4 with $\mathrm{TiCl}_{4}$ ( 1.2 equiv.) in $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ at $0^{\circ} \mathrm{C}-25$ ${ }^{\circ} \mathrm{C}$ for 15 min . addition of A -ethyldiisopropy lamine ( +.0 equiv.) at $25^{\circ} \mathrm{C}$. and finally stirring of the resulting dark brown solution for 2 lr .

The titanium enolate of 4 was then treated with 3-trimethylsilyl-2-propyn-1-al (5) (2.0 equiv.) ${ }^{11}$ which was already precomplexed with $\mathrm{TiCl}_{4}$ ( 2.4 equiv.) at $-78^{\circ} \mathrm{C}$, to provide the anti-aldol product 6 as a major product in $55 \%$ isolated yield. ${ }^{\text {1/ }}$ TMS group of anti-aldol ester 6 was remov-

Scheme 1. Retrosynthetic Aulalsis of Amplidinolide $O(1)$.
"Comesponding author L-mail: dhlee ôces.sogang.ac.kr
ed with tetra-n-butylanmonium fluoride ( 1.5 equiv.. 1.0 M in THF) in THF. ${ }^{12}$ The chiral auxiliary ester 7 was directly esterified with a solution of methyl magnesium chloride (6.0 equiv.. 3.0 M in THF) in methanol. ${ }^{13}$ Hydrostannylation of acety lene 8 with tributyltin hydride ( 1.5 equiv.) and AIBN (cat.) followed by metal-halogen exchange with iodime (1.2 equiv.) in diethyl ether yielded the desired ( $E$ )-vinyl iodide 10 in $54 \%$ yield over 2 steps. ${ }^{1-1}$

The tertiary alcohol $\mathbf{1 2}$ was prepared from the iodide to 10 via a two-step sequence: PMB-protection ${ }^{15}$ of secondary alcohol 10 with 4 -methoxy benzyl trichloroacetimidate ( 1.0 equiv.) and $p$-tolnenesulfonic acid (cat.) in $\mathrm{CH}_{2} \mathrm{Cl}_{2} / c$-hevane and then the addition of methyl magnesium chloride (3.0 equiv.. 3.0 M in THF) in THF. Finally. dehydration with methanesulfonyl chloride (5.0 equiv.) and triethylamine ( 10.0 equiv.) in $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ p produced the target fragment 3 in $80 \%$ yield. ${ }^{17}$

Scheme 2. Reagents and reaction conditions: (a) $\mathrm{TiCl}_{4}, \mathrm{CH}_{2} \mathrm{Cl}_{2}$; ()-
 $55 \%$ : (b) $\mathrm{TBAl}^{-}$THIF- rt, $2 \mathrm{hr} .8\left(\% \%\right.$. (c) $\mathrm{CH}_{3} \mathrm{MgCl}, \mathrm{MeOH} . \mathrm{rt}, 12$ $\mathrm{hr}, 78 \%$ ( d$) n-\mathrm{Bu} \mathrm{u}_{3} \mathrm{SnLI}$. AIBN, $85^{\circ} \mathrm{C}, 2 \mathrm{hr} .68 \%$ (e) $\mathrm{I}_{2}$. Et O , rt. 10 mint, $80 \%$; (t) PMB-TC $\wedge, \mathrm{TsOH}, \mathrm{CH}_{2} \mathrm{Cl}_{2} / \mathrm{c}-$-Hexane, $\mathrm{rt}, 12 \mathrm{hr}, 60 \%$ : (g) $\mathrm{CH}_{3} \mathrm{Mg} \mathrm{Cl}, \mathrm{THF}, \mathrm{rt}, 1 \mathrm{hr}, 70 \%$; (h) $\mathrm{MsCl}, \mathrm{Fit}_{3} \mathrm{~N}, \mathrm{CH}_{2} \mathrm{Cl}_{2},-10{ }^{\circ} \mathrm{C}$ : $30 \mathrm{~min} 80 \%$.

Scheme 3. Determination of relative stereochemistry of aldol product 6. (a) $\mathrm{I} . \mathrm{AlH}_{4}, \mathrm{THF}, 0{ }^{\circ} \mathrm{C}, 1 \mathrm{hr}, 60 \%$ (b) $\left(\mathrm{CH}_{3}\right)_{2} \mathrm{C}\left(\mathrm{OCH}_{3}\right)_{2}$ PYTS, $\mathrm{ClH}_{2} \mathrm{Cl}_{2}, \mathrm{rl}, 12 \mathrm{hr}, 65 \%$.

In order to establish the relative stereochemistry. the antialdol product 6 was converted to the acetonide 13 by reduction with lithium aluminum hydride ( 2.5 equiv.) in THF at $0^{\circ} \mathrm{C}$ followed by exposure of resulting diol to 2.2dimethoxypropane ( 10.0 equiv.) in the presence of a catalytic amount of pyridinium $p$-toluenesulfonate in $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ (Scheme 3 ). ${ }^{10 / 4}$ The relative stereochemistry at Cl 4 -C15 was confirmed umambiguously by ${ }^{1} \mathrm{H}$ NOE difference spectroscopy ( $1.83 \%$ endrancement of the 20 -Me signal upon irradiation of $\mathrm{H}_{\mathrm{n}}$ ) and a coupling constant $/ /_{\mathrm{ab}}$ of 10.5 Hz . which suggests the anti configurational relationship in 6 . ${ }^{1 \mathrm{P}_{\mathrm{t}} 16}$

In summary, we have achieved the stereoselective synthesis of $\mathrm{C} 12-\mathrm{Cl} 7$ fragment $\mathbf{3}$ from the chiral propionate ester 4 wia 8 step sequences in $6.3 \%$ overall yield

## Experimental Section

3-Trimethylsilyl-2-propyn-1-al (5). Solid pyridinium chlorochromate ( 1.85 g .8 .56 mmol .1 .1 equiv.) was added to a stirring solution of 3-trimethylsilyl-2-propy in-l-ol $(1.0 \mathrm{~g}$. 7.79 mmol .1 .0 equiv.) in dichloromethane ( 15 mL ). Stirring continued in a sealed flask for 6 hr at room temperature. The solution was filtered through a pad of Celite, and the remaining black precipitant in the flask was rinsed with diethyl ether ( 50 mL ) followed by filtration. The filtrates were combined and dried over anhydrous $\mathrm{MgSO}_{4}$, filtered and concentrated to give aldehy de 5 as a brown oil in $50 \%$ yield ( 0.49 g ). The crude aldehyde 5 was used without further purification. TLC $R_{f} 0.60(10 \% \mathrm{EtOAc}$ in hexane): ${ }^{1} \mathrm{H}$ NMR $\left(\mathrm{CDCl}_{3} .300 \mathrm{MHz}\right) \delta 0.22(\mathrm{~s}, 9 \mathrm{H}) .9 .20(\mathrm{~s}, 1 \mathrm{H})$.
(1S,2R)-N-[2,3-Dihydro-2-((2S,3S)-3-hydroxy-2-methyl-5-trimethylsilyl-1-0xo-pent-4-ynoxy)-1 H -inden-1-yl]-4methylbenzenesulfonamide (6). To a solution of propionate ester 4 ( 1.0 g .2 .78 mmol .1 .0 equiv.) in dry $\mathrm{CH}_{2} \mathrm{Cl}_{2}(1+\mathrm{mL})$ was added IM solution of $\mathrm{TiCl}_{1}(3.33 \mathrm{~mL}$, 3.33 mmol .1 .2 equiv.) in $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ dropwise wia syringe under $\mathrm{N}_{2}$ at $0^{\circ} \mathrm{C}$. The resulting solution was allowed to warm to room temperature and stirred for an additional 15 min. A -ethyldiisopropyl- amine ( $1.94 \mathrm{~mL}, 11.22 \mathrm{mmol}$, 4.0 equiv.) was added to this solution dropwise at $25^{\circ} \mathrm{C}$ by syringe. The color of the solution became brown after stirring for an additional 1 hr at $25^{\circ} \mathrm{C}$. In a separate flask. to a stirred solution of aldehyde 5 ( 706 mg .5 .56 mmol .2 .0 equis.) in $\mathrm{CH}_{2} \mathrm{Cl}_{-}(28 \mathrm{~mL})$ at $-78^{\circ} \mathrm{C}$. was added a 1 M solution of $\mathrm{TiCl}_{1}$ ( $6.67 \mathrm{~mL} .6 .67 \mathrm{mmol}, 2 .+$ equiv.) in $\mathrm{CH}_{2} \mathrm{Cl}_{2}$ - The resulting reaction mixture was stirred at $-78{ }^{\circ} \mathrm{C}$
for 5 min , the above enolate solution was added to the aldehyde 5 solution dropwise via cannula over a period of 5 min. The reaction mixture was stirred at $-78^{\circ} \mathrm{C}$ for 2 hr and then it was quenched by addition of aqueous $\mathrm{NH}_{4} \mathrm{Cl}$ solution. The layers were separated and the aqueous layer was extracted with $\mathrm{CH}_{2} \mathrm{Cl}_{2}$. The combined organic extracts were washed with brine, dried over anlyydrous $\mathrm{MgSO}_{4}$. filtered and concentrated under reduced pressure to afford a residue which was purified by silica gel chromatography ( $20 \% \mathrm{EtOAc}$ in hexane) to yield the title aldol product 6 ( $743 \mathrm{mg} .55 \%$ ) as a white solid. TLC $R_{f} 0.50(33 \%$ EtOAc in hexane); m.p. $53-55^{\circ} \mathrm{C}:[\alpha]_{0}^{\mathrm{J}^{-}}=-22.3$ (c 2.77 . $\mathrm{CHCl}_{3}$ ): IR ( KBr pellet) 3479, 3283. 3049. 2958, 2921, 2224. 1725. 1336. $1124 \mathrm{~cm}^{-1}:{ }^{1} \mathrm{H}$ NMR ( $\left.\mathrm{CDCl}_{3} .500 \mathrm{MHz}\right) \delta$ $7.81(\mathrm{~d}, 2 \mathrm{H}, J=8 \mathrm{~Hz}) .7 .32-7.15(\mathrm{~m}, 6 \mathrm{H}), 6.02(\mathrm{~d} .1 \mathrm{H} . (3S,4S)-2,3-Dimethyl-2-hydroxy-6-iodo-4-p-methoxy-benzyloxy-( $5 E$ )-heptenoate (12). To a solution of ester 11 ( $100 \mathrm{mg}, 0.25 \mathrm{mmol}, 1.0$ equiv.) in THF ( 2 mL ) at $0{ }^{4} \mathrm{C}$ was added methylmagnesium chloride ( 0.25 mL .3 .0 equiv.. 3.0 M in THF) and stirring was continued for 1 hr . The reaction mixture was quenched with saturated ammonium chloride. The mixture was extracted with ethyl acetate. The combined organic extracts were dried over $\mathrm{MgSO}_{4}$. filtered and concentrated in vacuo. The residue was purified by column chromatography ( $25 \% \mathrm{EtOAc}$ in hexane) to provide the tertiary alcohol 12 (70 mg. 70\%) as a colorless oil. TLC $R_{f}$ $0.45(33 \% \mathrm{EtOAc}$ in hexane $) ;[\alpha]_{\mathrm{D}}^{27}=+58.2\left(c 0.1, \mathrm{CHCl}_{3}\right)$ : IR (neat) 3053. 2986, 1522, 1421, 1265. 909, $738 \mathrm{~cm}^{-1}:{ }^{1} \mathrm{H}$ NMR ( $\mathrm{CDCl}_{3} .500 \mathrm{MHz}$ ) $\delta 7.2+-7.2 \mathrm{~L}(\mathrm{~m} .2 \mathrm{H}), 6.89-6.87(\mathrm{~m}$. $2 \mathrm{H}) .6 .47-6.33(\mathrm{~m}, 2 \mathrm{H}),+.56(\mathrm{~d} .1 \mathrm{H}, J=11 \mathrm{~Hz}), 4.27(\mathrm{~d}, 1 \mathrm{H}$. $j=11 \mathrm{~Hz}) .3 .80(\mathrm{~s}, 3 \mathrm{H}) .3 .75-3.72(\mathrm{~m} .1 \mathrm{H}) .1 .8+-1.78(\mathrm{~m}$. 1H). 1.58 (brs. 1 H ). 1.15 (s. 3 H ), 1.07 (s. 3 H$) .0 .78$ (d. $3 \mathrm{H} . ~ J$ $=8 \mathrm{~Hz}):{ }^{13} \mathrm{C}$ NMR $\left(\mathrm{CDCl}_{3}, 125 \mathrm{MHz}\right) \delta 159.5 .145 .6 .129 .9$. 129.7, 128.8, 113.9. 85.8. 80.1. 73.2, 70.4, 55.3. 46.5. 29.5. 23.5. 13.7: $\mathrm{GC} / \mathrm{MS}(\mathrm{m} / \mathrm{z})$ calcd. for $\mathrm{C}_{16} \mathrm{H}_{2}, \mathrm{IO}_{3}\left(\mathrm{M}^{+}\right) 390.07$. found 393.09: Anal.
