# A Facile Synthesis of Cyclopenta[d][1,2]oxazines through [6+4] Cycloaddition Reaction 

Sung Yun Cho." Seung Kyu Kang. Jin Hee Ahn. Jae Du Ha, Gyu Hwan Yon, and Joong-Kwon Choi<br>Bio-Medicinal Science Division, Korea Research Institute of Chemical Technology, Yuseong-gu, Daejeon 305-600, Korea<br>"E-mail: sycho@krict.re.kr<br>Received May 15, 2006

Key Words: Cyclopenta[d][1,2]oxazine, Cycloaddition

Functionalized 1,2 -oxzines ${ }^{1}$ are known to exhibit various pharmacological properties, such as antibacterial activity, ${ }^{2}$ acetylcholinesterase inhibitory activity, ${ }^{3}$ protein tyrosine phosphatase inhibitory activity. ${ }^{4}$ They also occur as a key structural subunit in biologically active natural products. ${ }^{5}$
However, there have been only limited methods for the synthesis of cyclopenta [d] [1,2] oxazines and their derivatives. Linn and Sharkey reported the first practical synthesis of cyclopenta[d/[1,2]oxazine by use of benzoylated cyclopentadiene. Lloyd and co-workers ${ }^{7}$ also reported the synthesis of cyclopenta[ $d[1,2]$ oxazine by reaction of diaroylcyclopentadienes with hydroxylamine. The reaction of benzonitrile oxide with fulvene was known to yield both $1: 1$ and $2: 1$ adducts. ${ }^{8}$

Herein, we report the first example of a facile and convenient synthesis of various cyclopenta[d] [1,2]oxazines starting from chlorooxime and fulvene through $[6+4]$ cycloaddition. In an effort to pursue of PTP1B inhibitors, ${ }^{9}$ a convenient synthesis of functionalized cyclopenta[ $d][1,2]$ oxazine derivatives was required. Fulvenes were obtained from the reaction of dimethyl sulfate salt of dimethylamides 3 and cyclopentadienyl sodium as cited. ${ }^{10}$
Howe and co-workers ${ }^{11}$ reported a convenient synthesis of
chlorooximes by the use of N -chlorosuccinimide in DMF in place of chlorine, avoiding the use of hazardous chlorine and ring chlorination as side reactions with benzaldoximes that contain electron-donating substituents. Based on this efficient synthetic methodology for chlorooximes 2 , we could achieve a facile synthesis of various cyclopenta[d][1,2]oxazines 5 by the cyclocondensation of 2 with fulvene 4 in the presence of triethylamine (eq. 1). The introduction of alkyl or aromatic substituents at 1-position could be accomplished by the use of substituted fulvenes or chlorooximes as given in Table 1. Diethyl ether was the solvent of choice over dichloromethane ( $41 \%$ yield, 5 a) for cycloaddition and all of the reaction afforded the corresponding cyclopenta[d][ 1,2 ]oxazines in moderate yields. The relatively low yields for $\mathbf{5 c}, \mathbf{5 i}$, and $\mathbf{5 1}$ were presumably due to the deprotection of protective group, $t$-butyl or acetyl group. Cycloadditions of chlorooxime with fulvene are affected by the steric factor of the substituents ( $\mathbf{5 0}-\mathbf{5 r}$ ), as the introduction of substituent ( $\mathrm{R}^{1}$ ) lowered the reaction yield.

This method was then applied to substituted fulvenes $6{ }^{12}$ in situ generated from the corresponding cyclopentadiene, and $10^{13}$ as shown in Scheme 1. As can be seen, carbometh-

oxy group is readily introduced, although with low regioselectivity, to cyclopenta[d][1,2]oxazine skeleton 7. The other possible isomers were also isolated and identified (8, $13 \% ; 9,13 \%$ ). Compound 12 was also prepared from the corresponding substrate 10 in low yield.
Regioselective introduction of bromine to parent cyclopenta $[d][1,2]$ oxazines was easily accomplished by the treatment of 5 d with bromine in carbon tetrachloride to afford $7-$ bromocyclopenta[ $d][1,2]$ oxazine $\mathbf{1 3}$ in moderate yield (Scheme 2).
For the derivatization of the parent cyclopenta[d][1,2]oxazines, Mitsunobu reaction was applied to 14 , the demethylated product of $\mathbf{5 d}$, to afford the alkylated product $\mathbf{1 5}$ in moderate yield. The successful utilization of cyclo-

Scheme 2
addition of chlorooximes and $\mathrm{N}, \mathrm{N}$-dimethylaminofulvene to construct various cyclopenta[ $d /[1,2]$ oxazines in this reaction provides a convenient approach to the useful structural derivatives of cyclopenta[d][1,2]oxazine. Ongoing studies are being directed toward the further elaboration of cyclopenta[ $d][1,2]$-oxazine derivatives, extending the scope of parent compound to improve the corresponding biological activities.

## Experimental Section

Cyclopenta $[d][1,2]$ oxazine-4-carboxylic acid methyl ester (5a). To a stirred solution of cyclopenta-2,4-dienylidenmethyl dimethylamine ( $6.7 \mathrm{~g}, 55 \mathrm{mmol}$ ) and chlorohydroxyiminoyl acetic acid methyl ester ( $6 \mathrm{~g}, 55 \mathrm{mmol}$ ) in ether was added dropwise triethylamine ( $7.6 \mathrm{~mL}, 55 \mathrm{mmol}$ ) at $0^{\circ} \mathrm{C}$. The reaction mixture was stirred for 3 h at room temperature, and poured into water. The resulting mixture was extracted with ethyl acetate and organic layer was dried over $\mathrm{MgSO}_{4}$ and concentrated under reduced pressure. The residue was purified by column chromatography to afford 5 a as yellow solid ( $6.3 \mathrm{~g}, 65 \%$ ): ${ }^{1} \mathrm{HNMR}\left(300 \mathrm{MHz}, \mathrm{CDCl}_{3}\right) \delta$ $8.99(\mathrm{~d}, J=1.2 \mathrm{~Hz}, 1 \mathrm{H}), 7.42(\mathrm{~m}, 2 \mathrm{H}), 7.10(\mathrm{dd}, J=3.6,1.8$ $\mathrm{Hz}, \mathrm{IH}), 4.15(\mathrm{~s}, 3 \mathrm{H})$; MS m/e (relative intensity) 177 (100, $\mathrm{M}^{+}$), $132(28), 104(50)$.

Likewise the following compounds were prepared.
Cyclopenta $[d][1,2]$ oxazine-4-carboxylic acid ethyl ester (5b). IR (KBr) $1727,1626 \mathrm{~cm}^{-1} ;{ }^{1} \mathrm{H}$ NMR ( 300 MHz , $\left.\mathrm{CDCl}_{3}\right) \delta 9.00(\mathrm{~d}, J=1.2 \mathrm{~Hz}, \mathrm{IH}), 7.45(\mathrm{~m}, 2 \mathrm{H}), 7.12(\mathrm{dd}, J$ $=4.1,1.2 \mathrm{~Hz}, 1 \mathrm{H}), 4.56(\mathrm{q}, J=7.3 \mathrm{~Hz}, 2 \mathrm{H}), 1.50(\mathrm{t}, J=7.3$ $\mathrm{Hz}, 3 \mathrm{H})$; MS $m / e$ (relative intensity) $191\left(\mathrm{M}^{+}, 100\right), \mathrm{I} 19$ (52), 118 (60).

Cyclopenta $[d][1,2]$ oxazine-4-carboxylic acid tert-butyl ester (5c). ${ }^{1} \mathrm{H}$ NMR ( $300 \mathrm{MHz}, \mathrm{CDCl}_{3}$ ) $\delta 8.99$ (d, $J=1.2$ $\mathrm{Hz}, 1 \mathrm{H}), 7.39(\mathrm{~m}, 2 \mathrm{H}), 7.09(\mathrm{dd}, J=3.4,1.2 \mathrm{~Hz}, 1 \mathrm{H}), 1.75$ ( $\mathrm{s}, 9 \mathrm{H}$ ); MS $m / e$ (relative intensity) $219\left(\mathrm{M}^{+}, 1\right), 176(0.3)$, 118 (2.9), 57 (100).

4-(4-Methoxyphenyl)cyclopenta[d][1,2]oxazine (5d). ${ }^{1} \mathrm{H}$ $\operatorname{NMR}\left(\mathrm{CDCl}_{3}\right) \delta 9.01(\mathrm{~d}, J=1.2 \mathrm{~Hz}, 1 \mathrm{H}), 7.44-7.25(\mathrm{~m}, 4 \mathrm{H})$, $7.15(\mathrm{~m}, 2 \mathrm{H}), 7.07(\mathrm{dd}, J=4.4,1.2 \mathrm{~Hz}, 1 \mathrm{H}), 4.84(\mathrm{~s}, 3 \mathrm{H})$; MS $m / e$ (relative intensity) $225\left(50, \mathrm{M}^{+}\right), 182$ (24), 154 (15).
(2,6-Dibromo-4-cyclopenta[d][1,2]oxazin-4-yl-phenoxy)-
acetic acid ethyl ester (5e). $\mathbb{R}$ ( KBr ) $1713,1465 \mathrm{~cm}^{-1}$; 'H NMR ( $300 \mathrm{MHz}, \mathrm{CDCl}_{3}$ ) $\delta 9.1(\mathrm{~d}, J=1.2 \mathrm{~Hz}, 1 \mathrm{H}), 8.25(\mathrm{~s}$, $2 \mathrm{H}), 7.39(\mathrm{~m}, 1 \mathrm{H}), 6.98(\mathrm{~m}, 1 \mathrm{H}), 4.64(\mathrm{~s}, 2 \mathrm{H}), 4.37(\mathrm{q}, J=$ $7.2 \mathrm{~Hz}, 2 \mathrm{H}), 1.38(\mathrm{t}, J=7.2 \mathrm{~Hz}, 3 \mathrm{H})$.
[2,6-Dibromo-4-(1-methyl cyclopenta[d][1,2]oxazin-4yl)phenoxy]acetic acid ethyl ester (5f). ${ }^{1} \mathrm{H}$ NMR ( 300 $\left.\mathrm{MHz}, \mathrm{CDCl}_{3}\right) \delta 8.06(\mathrm{~s}, 2 \mathrm{H}), 7.31(\mathrm{~m}, 1 \mathrm{H}), 7.13(\mathrm{dd}, J=4.4$, $1.2 \mathrm{~Hz}, 1 \mathrm{H}), 6.90(\mathrm{dd}, J=3.0,1.2 \mathrm{~Hz}, 1 \mathrm{H}), 4.69(\mathrm{~s}, 2 \mathrm{H}), 4.35$ $(\mathrm{q}, J=7.1 \mathrm{~Hz}, 2 \mathrm{H}), 2.85(\mathrm{~s}, 3 \mathrm{H}), 1.36(\mathrm{t}, J=7.1 \mathrm{~Hz}, 3 \mathrm{H}) ;$ MS $m / e$ (relative intensity) $471\left(\mathrm{M}^{+}, 57\right), 454(50), 382(100)$, 288 (15), 117 (37).

To a stirred solution of 1-fomyl-6dimethylaminofulvene ( $3.4 \mathrm{~g}, 0.028 \mathrm{mmol}$ ) in dichloromethane ( 50 mL ) was added methyl chlorooximido acetate $(3.85 \mathrm{~g}, 0.028 \mathrm{mmol})$ and triethylamine $(2.8 \mathrm{~g}, 0.028 \mathrm{mmol})$. The reaction mixture was stirred at room temperature for 13
h . The resulting mixture was poured into ice water and extracted with ethyl acetate. The organic layer was dried over $\mathrm{MgSO}_{4}$ and concentrated under reduced pressure. The residue was purified by column chromatography to afford $\mathbf{1 2}$ $(0.63 \mathrm{~g}, 11 \%): \mathrm{mp} .139^{\circ} \mathrm{C}$; ${ }^{1} \mathrm{H}$ NMR ( $300 \mathrm{MHz}, \mathrm{CDCl}_{3}$ ) $\delta$ $10.10(\mathrm{~s}, 1 \mathrm{H}), 9.73(\mathrm{~d}, J=1.2 \mathrm{~Hz}, 1 \mathrm{H}), 8.02(\mathrm{~d}, J=3.3 \mathrm{~Hz}$, $1 \mathrm{H}), 7.43(\mathrm{dd}, J=3.3,1.2 \mathrm{~Hz}, 2 \mathrm{H}), 4.58(\mathrm{q}, J=7.4 \mathrm{~Hz}, 2 \mathrm{H})$, $1.50(\mathrm{t}, J=7.4 \mathrm{~Hz}, 3 \mathrm{H}) ;{ }^{13} \mathrm{C}$ NMR ( $300 \mathrm{MHz}, \mathrm{CDCl}_{3}$ ) $\delta$ $186.1,161.3,159.8,148.7,145.3,127.9,119.8,118.3,117.3$, 63.1, 14.1; MS m/z (relative intensity) $219\left(\mathrm{M}^{+}, 49\right), 146$ (33), 119 (55), 118 (100), 91 (21), $90(79)$.

7-Bromo-4-(4-methoxyphenyl)cyclopenta [d][1,2]oxazine (13). To a solution of 4-(4-methoxyphenyl)cyclopenta[d][1,2]oxazine 5 d ( $100 \mathrm{mg}, 0.35 \mathrm{mmol}$ ) in carbon tetrachloride $(3 \mathrm{~mL})$ was added bromine ( $62 \mathrm{mg}, 0.39 \mathrm{mmol}$ ) at room temperature. The reaction mixture was stirred for 1 h at the same temperature. The resulting mixture was poured into water $(10 \mathrm{~mL})$ and extracted with ethyl acetate $(20 \mathrm{~mL})$. The organic layer was dried over $\mathrm{MgSO}_{4}$ and concentrated under reduced pressure. The residue was purified by column chromatography to afford $\mathbf{1 3}$ ( $102 \mathrm{mg}, 65 \%$ ): 'H NMR ( 300 $\left.\mathrm{MHz}, \mathrm{CDCl}_{3}\right) \delta 8.98(\mathrm{~s}, 1 \mathrm{H}), 7.82(\mathrm{~m}, 2 \mathrm{H}), 7.28(\mathrm{~m}, 1 \mathrm{H})$, $7.15(\mathrm{~m}, 2 \mathrm{H}), 6.82(\mathrm{~m}, 1 \mathrm{H}), 1.26(\mathrm{q}, J=7.1 \mathrm{~Hz}, 3 \mathrm{H})$; MS $\mathrm{m} / \mathrm{e}$ (relative intensity) $305\left(\mathrm{M}^{+}, 61\right), 303$ (59), $290(34), 288$ (28), 196 (25).

4-Cyclopenta $[d][1,2]$ oxazin-4-ylphenol (14). To a stirred solution of 4-(4-methoxyphenyl)cyclopenta [d][1,2]oxazine $5 \mathrm{~d}(2.2 \mathrm{~g}, 9.79 \mathrm{mmol})$ in dichlomethane $(5 \mathrm{~mL})$ was added boron tribromide in dichloromethane ( 14 mL of 1 M solution, 14 mmol ) dropwise at $-78^{\circ} \mathrm{C}$ and stirred for 13 h at room temperature. The resulting mixture was poured into water, and extracted with dichloromethane. The organic layer was dried over $\mathrm{MgSO}_{4}$ and concentrated under reduced pressure. The residue was purified by column chromatography to afford $14(1.7 \mathrm{~g}, 55 \%)$ : ${ }^{1} \mathrm{H}$ NMR ( 300 MHz , $\left.\mathrm{CdCl}_{3}\right) \delta 9.01(\mathrm{~s}, 1 \mathrm{H}), 7.36-7.25(\mathrm{~m}, 3 \mathrm{H}), 7.10(\mathrm{dd}, J=4.6$, $1.2 \mathrm{~Hz}, 1 \mathrm{H}), 6.97-6.86(\mathrm{~m}, 2 \mathrm{H}), 6.68-6.64(\mathrm{~m}, 1 \mathrm{H}), 6.19$ (brs, 1 H ); MS m/e (relative intensity) $211\left(\mathrm{M}^{+}, 10\right), 182(26)$, 154 (8), 127 (5).
(s)-2-(4-Cyclopenta[d][1,2]oxazin-4-yl-phenoxy)-3-phenyl propionic acid methyl ester (15). To a stirred solution of 4cyclopenta[ $d$ ] [1,2]oxazin-4-yl-phenol 13 ( $300 \mathrm{mg}, 1.38$ mmol), ( $R$ )-2-hydroxy-3-phenyl propionic acid methyl ester ( $298 \mathrm{mg}, 1.68 \mathrm{mmol}$ ), triphenylphosphine ( 726 mg 2.76 mmol ) in tetrahydrofuran ( 5 mL ) was added dropwise diisopropylazodicarboxylate ( $492 \mathrm{mg}, 2.76 \mathrm{mmol}$ ) at $0{ }^{\circ} \mathrm{C}$ and stirred for 12 h at room temperature. The resulting
mixture was poured into water, and extracted with dichloromethane. The organic layer was dried over $\mathrm{MgSO}_{4}$ and concentrated under reduced pressure. The residue was purified by column chromatography to afford $15(246 \mathrm{mg}, 76 \%)$ : ${ }^{1} \mathrm{HNMR}\left(300 \mathrm{MHz}, \mathrm{CdCl}_{3}\right) \delta 9.02(\mathrm{~d}, J=1.4 \mathrm{~Hz}, 1 \mathrm{H}), 7.41-$ $7.22(\mathrm{~m}, 9 \mathrm{H}), 7.09-7.06(\mathrm{~m}, 2 \mathrm{H}), 6.58-6.56(\mathrm{~m}, 1 \mathrm{H}), 4.81(\mathrm{t}$, $J=6.4 \mathrm{~Hz}, 1 \mathrm{H}), 3.70(\mathrm{~s}, 3 \mathrm{H}), 3.25(\mathrm{~d}, J=6.6 \mathrm{~Hz}, 2 \mathrm{H})$.
