ABSTRACT

This study describes the growth, contribution and impact of research carried out by University of Mysore scientists in science and technology. It indicates the patterns of communications of university scientists and studies the extent of concentration and scattering of their research output in different journals. It also analyses the strong and weak areas of university research, their growth rate and impact in terms of average citations received. It also studies the output and impact of research under different existing subject departments of the university and analyses the international collaborative share of research output at the overall level as well as across various subjects, indicating also the major countries involved in international collaboration. It describes the share and characteristics of select high cited papers and the top productive authors.

KEYWORDS

Informetrics - University of Mysore, Informetrics, Citation Analysis, Research Productivity, Communication Pattern, International Collaboration in Research, Case study

1. Introduction

Research productivity in higher education is gaining importance for the past one decade in India. Faculty members of the universities in India have two functions to perform teaching and research. Teaching is one of the canonically performed functions. However, research in universities has gained momentum during the past one and half decade, mainly due to support received through Ph.D. projects, in-house projects, and extra-

mural funding projects from major government scientific agencies. The research output of the university scientists in the form of research papers in peer-reviewed scholarly journals is being considered as one of the main criteria for assessing the performance of the university scientists and faculty. The University of Mysore has been accredited "A+" by National Assessment and Accreditation Council in 2006.

The University of Mysore is among the foremost institutions of its kind, and is an enduring symbol in the sphere of

higher education in India. It was founded by the then Maharaja of Mysore, His Highness Sri Krishnaraja Wodeyar IV and his Dewan, the renowned engineer statesman, Sir M.Visvesvaraya, on July 27, 1916. The Maharaja of Mysore became its first chancellor. A Bill to establish and incorporate the University was introduced in Mysore Legislative Council in 1916. It was passed unanimously on 17th July 1916. The first meeting of the University Council was held on 12th August 1916 and the first meeting of the senate on 12th October 1916.

The first Act of the University came in the year 1933 (University of Mysore Act 1933). The University offered a two-year intermediate course, three year B.A.(Hons), B.Sc.,(Hons) Degree courses and M.A., M.Sc. courses. There were also the faculties of Medicine and Engineering. The University also offered diplomas in vocational subjects. The University Extension Lectures and Publication Bureau were notable features of the university. The main campus of the university created in 1960, lies in a picturesque area of 739 acres at the western end of the Kukkerahalli Lake. The university headquarters, the Crawford Hall, is located right across

the lake on the eastern end. This inspiring locale of the campus was aptly named Manasagangotri (fountainhead of the Ganges of the Mind) by the poet-laureate, Dr. K.V.Puttappa (Kuvempu). In due course, two satellite campuses were set up in response to the demands of postgraduate education from semi-urban /rural areas: Sir M.Visvesvaraya Postgraduate Centre at Tubinakere in Mandya, and the Mysore University Postgraduate Centre at Hemagangotri in Hassan.

There are 37 postgraduate departments in University of Mysore, of which 14 are science departments. In all 132 faculty members are working in these science departments. An attempt has been made in this communication to analyze the contribution, growth and impact of the research output of the university scientists working in different S&T departments and faculties of the University of Mysore for the past one decade.

2. Objectives

The main objectives are :

- 1) To study the publication pattern of faculty of science and technology of Uni-

versity of Mysore between 1996 to 2006;

2) To study the impact of research output of the faculty of science and technology of University of Mysore.

3) To analyze the contribution of the authors of University of Mysore in national and international journals

4) To identify strong and weak disciplines of University of Mysore with reference to the research output;

5) To study the international collaborative efforts by the academics of University of Mysore and

6) To rank the academics of University of Mysore based on their research output.

3. Methodology and Literature Review

The data for the study was downloaded from the Scopus database in June 2007. SCOPUS is an international multidisciplinary database indexing over 15,000 international peer reviewed journals in science and technology, besides more than 500 international conference/seminar proceedings. We have used 11 years publications data from 1996 to 2006 for analyzing

the growth and impact of university research. A larger time coverage data has been used to ensure accurate results. In addition, we have used citations data for qualitative analysis of Indian research output. Three years citations window has been used for computing average citations per paper for all papers published by India from 1996 to 2003. Two years citations window was used for all papers published in 2004, and one-year citations window used for all papers published in 2005.

Some studies have been conducted in the past analyzing the contribution and impact of individual organizations. Jeevan and Gupta¹⁻² have analyzed the contribution and impact of Indian Institute of Technology, Kharagpur by suggesting a methodology for studying the quantitative profile of a research cum teaching institute, with a view to get idea about its performance and impact. Similarly Singh, Gupta and Kumar³ studied the research contribution and impact of Indian Institute of Technology, Roorkee from 1993 to 2001. The present study looks at the methodology of evaluation and covers wider aspects than the earlier studies.

4. Data Analysis

4.1 Growth and Impact of Research

The University of Mysore published a total of 1,518 research papers in different disciplines of science and technology during 1996-2006, as seen from the Scopus database. During these 11 years, its publi-

cations output rose significantly, growing nearly by six times from 55 papers in 1996 to 307 in 2006. Its annual growth rate, computed on 11 years data averaged at 23.9%. Given its current pace of publication activity, it is estimated that the university publication output may rise to 400 papers per annum by 2010 (Table 1), (Fig 1).

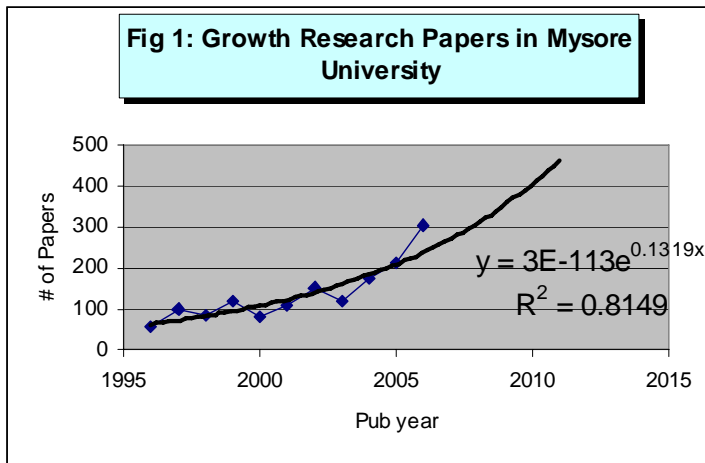

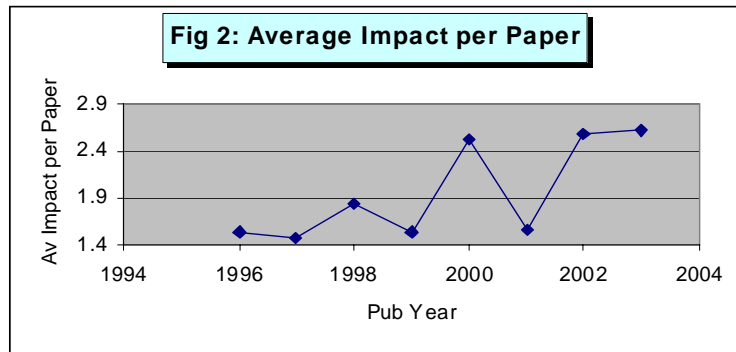

Table 1) Growth and Impact of Research

Year	# of papers	Annual Ave. growth rate %	# of citations	Ave. citations per paper
1996	55		84	1,53
1997	99	80,00	146	1,47
1998	86	-13,13	158	1,84
1999	119	38,37	183	1,54
2000	79	-33,61	200	2,53
2001	110	39,24	171	1,55
2002	153	39,09	395	2,58
2003	121	-20,92	317	2,62
2004	175	44,63	-	-
2005	214	22,29	-	-
2006	307	43,46	-	-
Total	1518	Ave 23,94	-	-

The impact of research was ascertained in terms of citations university papers received during the first three years of their publication. This citations data for its papers published during 1996-2003 was normalized into an indicator 'average citations per paper' mainly for studying and understanding comparative growth in citations impact over previous years. The university has come to demonstrate significant rise in terms of average citations per paper from 1.53 in 1996 to 2.62 in 2003. Hence, it could be stated

that the university has indeed progressed and has shown good quality research during 2000-03, except for the year 2000 (Table 1), (Fig 2)).

The university published its total research output in 405 peer reviewed national and international source journals in different disciplines of science and technology. The frequency distribution of university output in these 405 journals revealed a typical publication scattering pattern (Table 2). For example, the university faculty members published

(Table 2) Frequency Distribution of Papers in Various Source Journals

No. of papers	No. of Source Journals	No. of papers	No. of Source Journals	No. of papers	No. of Source Journals
1	214	11	2	23	2
2	51	12	2	26	1
3	47	13	4	32	1
4	16	14	2	34	1
5	11	15	2	43	1
6	9	17	1	106	1
7	9	18	1	-	-
8	14	19	2	-	-
9	5	21	3	-	-
10	2	22	1	-	-

more than 100 papers in just one single journal, in 3 different journals it published between 26 to 43 papers each, and in the remaining 401 journals, its publication frequency had been extremely, ranging between 1 and 26 each in 11 years. This data seek to demonstrate that visibility of the university in most source journals has been very low. This is also evident from the low cumulative productivity of university papers in different journal sets(〈Table 3〉). It is only in relatively select few journals that its

publication frequency has been somewhat better. The list of top 19 source journals is shown in 〈Table 4〉.

〈Table 3〉 Cumulative Productivity in Journals

Top Cumulative Journals	Cumulative No of Papers	Cumulative Share of Papers
10	351	0.23
20	516	0.34
30	631	0.42
40	719	0.47
50	799	0.53
60	868	0.57
70	926	0.61
80	975	0.64
90	1015	0.67

4.2 Subject-wise Study of Research Papers

The University of Mysore has published in nearly 16 major disciplines in science and technology during 1996-2006. However, it is in four major disciplines that research activity of the university has been dominating. Chemistry, physics & astronomy, biochemistry, genetics & molecular biology, and agriculture & biological sciences are the most dominating areas of its research. Based on publications data for 1996-06, its publications share in these four disciplines varied

between 18% and 48%. In addition, the university has been making strides in new and emerging areas of research. For example, chemical engineering, energy, immunology & microbiology, and biochemistry, genetics & molecular biology are its emerging areas of research.

Although the size of publications activity in these subject areas is still small (ranging between 1 to 46 papers in four years), but its growth rate in these disciplines has been relatively faster, rising from 100% to 2100%. Besides, the average citation per paper in these disciplines has been remarkably high, ranging be-

<Table 5> Subject-Wise Break-up of Papers and Impact

	# of papers			# of citations			Average citations per paper		
	96-99	00-03	96-03	96-99	00-03	96-03	96-99	00-03	96-03
Chemistry	131	205	336	252	533	785	1.92	2.6	2.34
Physics & Astronomy	66	69	135	57	101	158	0.86	1.46	1.17
Bioch, Genet. & Mol. Biol.	41	85	126	87	311	398	2.12	3.66	3.16

Computer Science	13	9	22	25	18	43	1.92	2	1.95
Multidisciplinary	11	4	15	17	9	26	1.55	2.25	1.73
Immunology & Microbiology	4	11	15	2	13	15	0.5	1.18	1
Energy	1	6	7	2	24	26	2	4	3.71
Health Professions	1	0	1	2	0	2	2	0	2
Total	359	463	696	471	1083	1554	1.31	2.34	2.23

tween 3.16 and 3.97. In comparison, the average citations per paper in the traditional subject disciplines have been varying between 1.17 and 2.34. It seeks to demonstrate that the university research has been doing comparatively better in terms of research impact in its emerging areas of research(〈Table 5〉).

4.3 Departments-Wise Profile of the University

As seen from publications data for University of Mysore indexed in Scopus database for 1996-2003, research output in science and technology is confined to

12 science departments of the university (〈Table 6〉). Chemistry department leads in publications productivity with 379 papers during 1996-2006, followed by physics department (179 papers), and zoology department (63 papers). The research output by the remaining nine departments has been very small ranging between 9 and 43 papers during 1996-06. However, despite showing publications output of smaller size, publishing 27 papers only, biochemistry department has emerged stronger in its average impact per paper. It showed the highest average impact per paper of 3.15. The geology department with average impact per paper of 2.81

〈Table 6〉 Department Wise Breakup of Papers by University of Mysore

	# of Papers			# of Citations			Average Citations per paper		
	96-99	00-03	96-03	96-99	00-03	96-03	96-99	00-03	96-03
App. Botany	14	21	35	15	59	64	1.07	2.81	1.83
Botany	13	10	23	8	10	18	0.62	1.00	0.78
Statistics	3	1	4	0	1	1	0.00	1.00	0.25
Physics	86	93	179	112	138	250	1.30	1.48	1.40
Zoology	31	32	63	56	46	102	1.81	1.44	1.62
Chemistry	140	239	379	260	635	895	1.86	2.66	2.36
Geology	26	17	43	64	57	121	2.46	3.35	2.81
Food Science	8	4	12	10	2	12	1.25	0.50	1.00
Biochemistry.	14	13	27	34	51	85	2.43	3.92	3.15
Comput. Sci.	6	6	12	6	6	12	1.00	1.00	1.00
Mathematics	7	6	13	1	1	2	0.14	0.17	0.15
Environment Science	4	5	9	8	4	12	2.00	0.80	1.33
Total	-	-	-	-	-	-	-	-	-

and chemistry department with average impact per paper of 2.36, followed the biochemistry department. The remaining departments showed average impact per paper in the lower ranges, varying between 0.25 and 1.83. Hence, departments of biochemistry and geology have indeed shown good performance in terms of quality research(〈Table 6〉).

4.4 International Collaborative Research

The university published nearly 14% of its papers through international collaboration with institutions from USA,

Germany, Japan, Canada, South Korea, and Denmark etc. Its collaborative research output during 1996-06 was the largest with USA (51%), followed by Germany (23%), Japan (10%), Canada (6%), South Korea (5%), and Denmark (4%). The publications activity through international collaborative research was the largest in physics (38.4%), followed by biochemistry (35.6%), and chemistry (28%). In other disciplines, its publication share of the international collaborative output has been small, varying between 0.5% and 13% (〈Table 7〉).

〈Fig 3〉 Publications Output by Subject through Collaborative Research

〈Table 7〉 Subject-Wise Break-up of Collaborative Papers

	Number of Collaborative Papers during 1996-06					
	USA	Germany	Japan	Canada	S. Korea	Denmark
Chemistry	53	1	6	-	-	1
Physics & Astronomy	22	40	9	4	9	-

Total	112	52	22	13	11	9

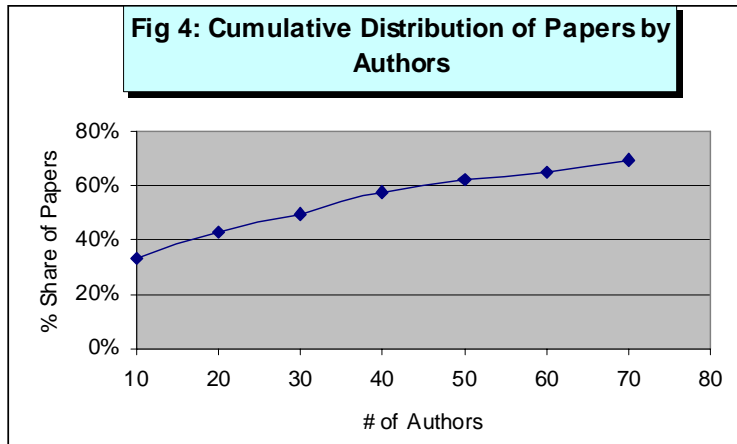

4.5 Author Productive Profile of University Members

〈Table 8〉 gives the details of top cumulative authors, the corresponding number of cumulative papers and their cumulative share. It can be observed from 〈Table 8〉 that research activity in the University of Mysore seems to be highly skewed. This is because top 80 authors account for 72% of total publications output by the university. This analysis is based on publication data in respect of the university in science and technology for its research papers published

during 1996-06. The cumulative distribution of their publications also seeks to convey the point that the excellence in University of Mysore is confined to a body of select few authors. In other words, a large body of authors from the university contribute very small share,

〈Table 8〉 Cumulative Productivity of Authors

Top Cumulative Authors	Cumulative No of Papers	Cumulative Share of Papers
10	498	0.33
20	656	0.43
30	764	0.50

20	R.S. Narasegowda Dept. of Studies in Zoology	25	29	141	4.86

nearly 29% of the total university output. It also means that majority of the authors from University of Mysore show low publication frequency (〈Table 8〉, 〈Fig 4〉). The select list of high productivity authors is given in 〈Table 9〉.

4.6 Highly Cited Papers

The University of Mysore published a total of 1,518 papers in 11 years, of which 17 papers have been considered as comparatively higher cited papers, each receiving 30 citations or more since their publication during 1996–2006. Of these, seven papers were published during

2000–2004, and the remaining 10 during 1996–1999. Out of these 17 papers, 11 papers involve international collaboration and 4 involve national collaboration. The paper coauthored by F D'Souza and published in 2004 received 91 citations, the highest number of citations. It means that international collaboration has increased the citation profile of university output. The full list of higher cited papers is shown in Table 10. It is to be noted that the share of highly cited papers in the total output by University of Mysore in science and technology is still not very significant.

5. Conclusion and Suggestion

The research activity in University of Mysore in science and technology is on a growing path, growing with an average growth rate of 23% per annum. This analysis is based on publications data consisting of 1,518 research papers, published by the university staff during 1996-2006. The university has indeed progressed in terms of quality of research. Its average citations per paper have risen from 1.53 in 1996 to 2.62 in 2003. Chemistry, physics & astronomy, biochemistry, genetics & molecular biology,

and agriculture & biological sciences are its most dominating research areas. Chemical engineering, energy, immunology & microbiology, and biochemistry, genetics & molecular biology are its emerging areas of research. Its quality of research and its growth rate in emerging areas of research is better than in traditional research areas.

The international collaborative research activity in the university is still very small, accounting for just 14% share. This is because the international collaborative research activity in the university is confined to select few subjects,

such as physics (38.4%), biochemistry (35.6%), and chemistry (28%). In other disciplines, it is still a low-key affair, varying between 0.5% and 13%. The collaborative research activity in the university is also confined to select few countries. It is the largest with USA (51%), followed by Germany (23%), and Japan (10%), Canada (6%). It is least with South Korea (5%), and Denmark (4%).

Research activity in the university seems to be highly skewed. The excellence in research is confined to select few authors. In other words, publication frequency of large majority of authors from the university is small. Besides, the share of highly cited papers in the university output is still not very significant.

With the globalization of academic community, nowadays, it is important to explore new opportunities for collaborative research with all countries from developed and developing world especially in the emerging areas of research such as chemical engineering, energy, immunology & microbiology, and biotechnology. Within the country the university departments may explore new models of collaborative research, such as

going in for university-private partnership in research, as well as university-national laboratories partnership in research. Such measures have the potential to catalyze publications activity, improve publication frequency of authors as well as help improve their quality of research.
